## USER'S MANUAL

Revision 1.1

---

The information in this User's Manual has been carefully reviewed and is believed to be accurate. The vendor assumes no responsibility for any inaccuracies that may be contained in this document, makes no commitment to update or to keep current the information in this manual, or to notify any person or organization of the updates. **Please Note: For the most up-to-date version of this manual, please see our web site at [www.supermicro.com](http://www.supermicro.com).**

Super Micro Computer, Inc. ("Supermicro") reserves the right to make changes to the product described in this manual at any time and without notice. This product, including software, if any, and documentation may not, in whole or in part, be copied, photocopied, reproduced, translated or reduced to any medium or machine without prior written consent.

IN NO EVENT WILL SUPERMICRO BE LIABLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL, SPECULATIVE OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OR INABILITY TO USE THIS PRODUCT OR DOCUMENTATION, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN PARTICULAR, SUPERMICRO SHALL NOT HAVE LIABILITY FOR ANY HARDWARE, SOFTWARE, OR DATA STORED OR USED WITH THE PRODUCT, INCLUDING THE COSTS OF REPAIRING, REPLACING, INTEGRATING, INSTALLING OR RECOVERING SUCH HARDWARE, SOFTWARE, OR DATA.

---

Any disputes arising between manufacturer and customer shall be governed by the laws of Santa Clara County in the State of California, USA. The State of California, County of Santa Clara shall be the exclusive venue for the resolution of any such disputes. Super Micro's total liability for all claims will not exceed the price paid for the hardware product.

---

FCC Statement: This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instruction manual, may cause interference with radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, you are encouraged to try to correct the interference by one or more of the following measures: Reorient or relocate the receiving antenna. Increase the separation between the equipment and the receiver. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. Consult the dealer or an experienced radio/television technician for help.

---

California Best Management Practices Regulations for Perchlorate Materials: This Perchlorate warning applies only to products containing CR (Manganese Dioxide) Lithium coin cells. "Perchlorate Material-special handling may apply. See [www.dtsc.ca.gov/hazardouswaste/perchlorate](http://www.dtsc.ca.gov/hazardouswaste/perchlorate)"

---

**WARNING: Handling of lead solder materials used in this product may expose you to lead, a chemical known to the State of California to cause birth defects and other reproductive harm.**

## Preface

### About This Manual

This manual is written for system integrators, PC technicians and knowledgeable PC users. It provides information for the installation and use of the **SUPER** X8DA3/X8DAi motherboard.

### About This Motherboard

The **SUPER** X8DA3/X8DAi supports the Intel 5500/5600 Series Processor platform, the first dual-processing platform that supports the Intel QuickPath Interconnect (QPI) Technology, which provides the next generation point-to-point system interface, replacing the current Front Side Bus. With the 5500/5600 Series Processor built-in, this motherboard substantially enhances system performance with increased bandwidth and unprecedented scalability, optimized for workstations, high-end CAD systems and intensive applications. Please refer to our website (<http://www.supermicro.com/products/>) for processor updates. This product is intended to be installed and serviced by professional technicians.

### Manual Organization

**Chapter 1** describes the features, specifications and performance of the motherboard and provides detailed information about the chipset.

**Chapter 2** provides hardware installation instructions. Read this chapter when installing the processor, memory and other hardware components into the system. If you encounter any problems, see **Chapter 3**, which describes troubleshooting procedures for video, memory and system setup stored in the CMOS.

**Chapter 4** includes provides information on running the CMOS Setup utility.

**Appendix A** lists BIOS POST Error Codes. **Appendix B** and **Appendix C** provide the Windows OS and Other Software Installation Instructions.

### Conventions Used in the Manual

Special attention should be given to the following symbols for proper installation and to prevent damage done to the components or injury to yourself:

**Warning:** Important information given to ensure proper system installation or to prevent damage to the components.

**Note:** Additional Information given to differentiate various models or to ensure correct system setup.

## Contacting Supermicro

### Headquarters

Address: Super Micro Computer, Inc.  
980 Rock Ave.  
San Jose, CA 95131 U.S.A.

Tel: +1 (408) 503-8000

Fax: +1 (408) 503-8008

Email: [marketing@supermicro.com](mailto:marketing@supermicro.com) (General Information)  
[support@supermicro.com](mailto:support@supermicro.com) (Technical Support)

Web Site: [www.supermicro.com](http://www.supermicro.com)

### Europe

Address: Super Micro Computer B.V.  
Het Sterrenbeeld 28, 5215 ML  
's-Hertogenbosch, The Netherlands

Tel: +31 (0) 73-6400390

Fax: +31 (0) 73-6416525

Email: [sales@supermicro.nl](mailto:sales@supermicro.nl) (General Information)  
[support@supermicro.nl](mailto:support@supermicro.nl) (Technical Support)  
[rma@supermicro.nl](mailto:rma@supermicro.nl) (Customer Support)

### Asia-Pacific

Address: Super Micro Computer, Inc.  
4F, No. 232-1, Liancheng Rd.  
Chung-Ho 235, Taipei County  
Taiwan, R.O.C.

Tel: +886-(2) 8226-3990

Fax: +886-(2) 8226-3991

Web Site: [www.supermicro.com.tw](http://www.supermicro.com.tw)

# Chapter 1

## Introduction

### 1-1 Overview

#### Checklist

Congratulations on purchasing your computer motherboard from an acknowledged leader in the industry. Supermicro boards are designed with the utmost attention to detail to provide you with the highest standards in quality and performance. Check that the following items have all been included with your motherboard. If anything listed here is damaged or missing, contact your retailer.

The following items are included in the retail box.

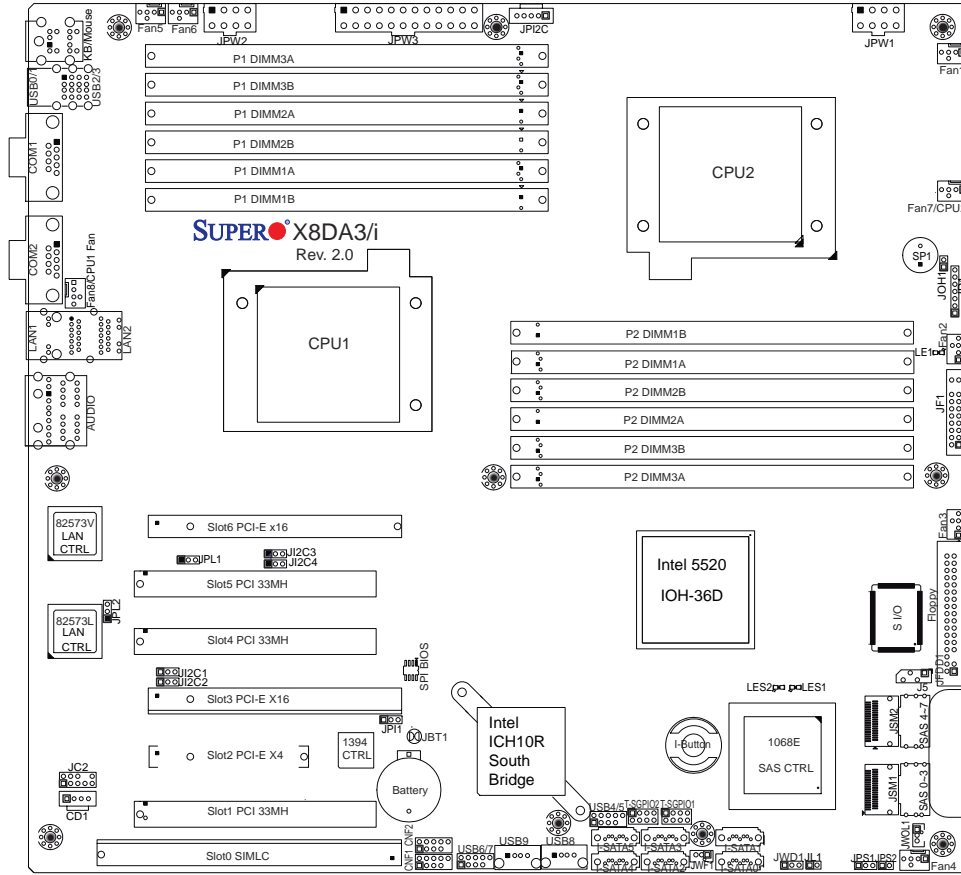

- One (1) Supermicro Mainboard
- One (1) floppy ribbon cable (CBL-022L)
- One (1) 1394a connector cable (CBL-0173L)
- Two (2) SAS cable for SATA/SAS Backplane (CBL-0097L-02) (For X8DA3)
- Four (4) Serial ATA cables (CBL-0044Lx4) (For X8DA3)
- Six (6) Serial ATA cables (CBL-0044Lx6) (For X8DAi)
- One (1) I/O backpanel shield (MCP-260-74301-0N)
- One (1) Supermicro CD containing drivers and utilities
- One (1) User's/BIOS Manual (MNL#1031)

## SUPER<sup>®</sup> X8DA3/X8DAi Image

 **Note:** The drawings and pictures shown in this manual were based on the latest PCB Revision available at the time of publishing of the manual. The motherboard you've received may or may not look exactly the same as the graphics shown in the manual.

## SUPER<sup>®</sup> X8DA3/X8DAi Motherboard Layout

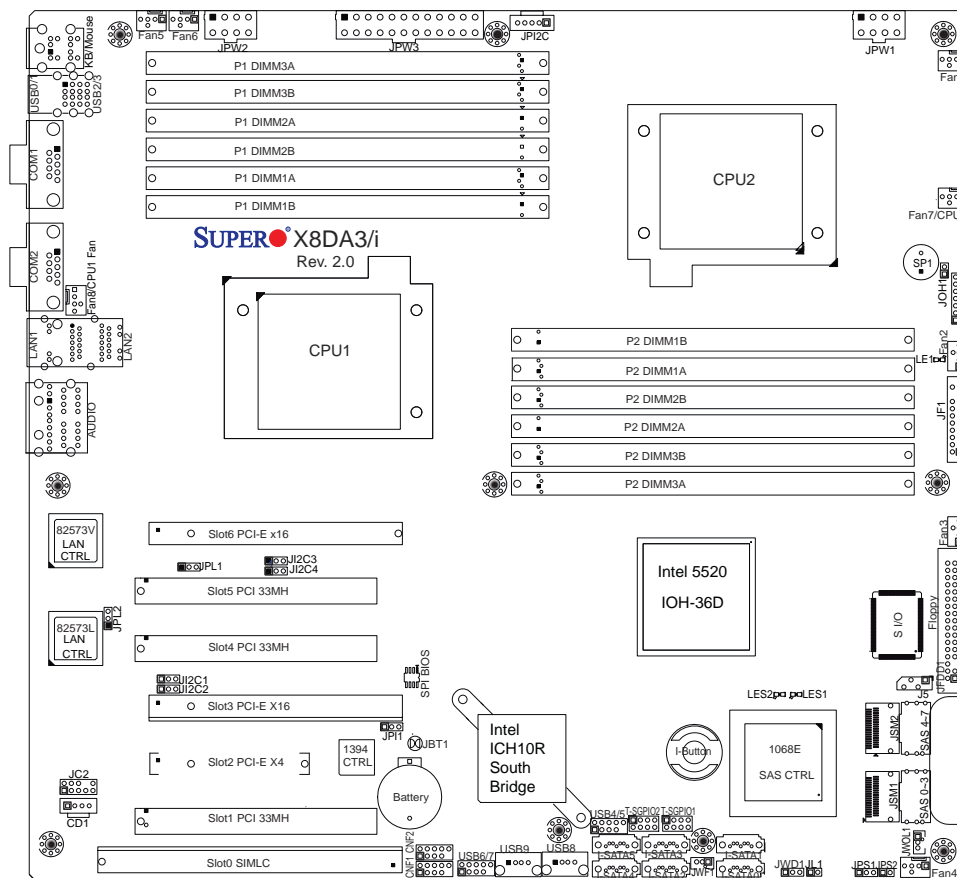

### Notes:

1. Jumpers not indicated are for test purposes only.
2. See Chapter 2 for detailed information on jumpers, I/O ports and JF1 front panel connections.
3. "■" indicates the location of Pin 1.
4. When LE1 LED is on, the onboard power connection is on. Make sure to unplug the power cables before removing or installing components.
5. IPMI (Intelligent Platform Management Interface) 2.0 is supported by the motherboard. To use this feature, please install a SIMLC add-on card on the SIMLC Slot (Slot 0). For more information on IPMI, please refer to the AOC-SIMLC User Guide @<http://www.supermicro.com/products/accessories/addon/SIM.cfm>.
6. The X8DA3 motherboard supports the LSI 1068E SAS Controller and 8 SAS connectors. To configure SAS RAID settings, please refer to the LSI MegaRAID User Guide posted at [http://www.supermicro.com/manuals/other/LSI/20MegaRAID\\_Configuration\\_for\\_the\\_LSI\\_1068\\_Controller.pdf](http://www.supermicro.com/manuals/other/LSI/20MegaRAID_Configuration_for_the_LSI_1068_Controller.pdf).

## X8DA3/X8DAi Quick Reference

### Warning!

1. To prevent damage to your power supply or motherboard, please use a power supply that contains a 24-pin and two 8-pin power connectors. Be sure to connect these power connectors to the 24-pin and the two 8-pin power connectors on your motherboard for adequate power supply to your system. Failure to do so will void the manufacturer warranty on your power supply and motherboard.
2. To avoid possible system overheating, please be sure to provide adequate airflow to your system.

**Note:** The Compact Flash Power connector (JWF1) is supported by the Rev. 2.0 and newer version of motherboard.

### X8DA3/X8DAi Quick Reference

<b>Jumper</b>	<b>Description</b>	<b>Default Setting</b>
JBT1	CMOS Clear	(See Chapter 2)
JI <sup>2</sup> C1/JI <sup>2</sup> C2	SMB to PCI-Exp. Slots	Pins 2-3 (Disabled)
JI <sup>2</sup> C3/JI <sup>2</sup> C4	SMB to PCI-X Slots	Pins 2-3 (Disabled)
JPI1	CNF1/CNF2 (1394a_1/2) Enable	Pins 1-2 (Enabled)
JPL1/JPL2	LAN1/2 Enable	Pins 1-2 (Enabled)
JPS1	SAS Enable (X8DA3)	Pins 1-2 (Enabled)
JPS2	SAS RAID Mode Select (X8DA3)	Closed (SR RAID Enabled)
JWD1	Watch Dog	Pins 1-2 (Reset)

<b>Connector</b>	<b>Description</b>
Audio/CD1/JC2	Audio Input_Output_Mic/CD-ROM/HD Audio Headers
CNF1/CNF2	IEEE 1394a Connectors 1/2
COM1/COM2	COM1/COM2 Serial Ports
FAN 1-8	System/CPU Fan Headers (Fans 7~8: CPU Fans)
Floppy	Floppy Disk Drive Connector
J5	SMB I <sup>2</sup> C Header
JD1	Speaker/Power LED Header
JF1	Front Panel Connector
JL1	Chassis Intrusion Header
JOH1	Overheat LED Header
JPI <sup>2</sup> C	Power Supply SMBus I <sup>2</sup> C Header
JPW1/JPW2	+12V 8-pin Secondary PWR Connector (See P. 1-4)
JPW3	24-pin ATX Main Power Connector (See P. 1-4)
JWF1	Compact Flash PWR (for R 2.0 or later board)
JWOL1	Wake-On-LAN Header
LAN1/2	Gigabit Ethernet Ports
I-SATA0 ~ I-SATA5	(Intel South Bridge) SATA Ports
SAS 0~3, 4~7	SAS Connectors (X8DA3 only)
SIMLC	(Low Profile) SIMLC IPMI 2.0 Socket
T-SGPIO-1/T-SGPIO-2	Serial General Purpose Input/Output Headers
(B/P) USB0/1/2/3	(Back Panel) Universal Serial Bus (USB) Ports
F/P USB 4/5, 6/7, 8, 9	Front Panel Accessible USB Headers

<b>LED</b>	<b>Description</b>
LE1	Onboard Standby PWR warning LED Indicator
LES1	SAS Activity LED (Green/Blinking: SAS Active) (X8DA3)
LES 2	SAS Heartbeat LED (Yellow/Blinking: SAS Normal) (X8DA3)

## Motherboard Features

### CPU

- Two Intel® 5500/5600 Series Processor (LGA 1366) processors. Each processor supports two full-width Intel QuickPath Interconnect links of up to 51.2 GB/s Data Transfer Rate (6.4 GT/s per direction)

### Memory

- Twelve 240-pin DIMM sockets support up to 96 GB Registered ECC or 48 GB Unbuf. ECC/Non-ECC DDR3 1333 MHz/1066 MHz/800 MHz DIMM modules

### Chipset

- Intel 5520 platform, including the IOH-36D and the ICH10R (South Bridge).

**Warning:** To avoid possible system overheating, please be sure to provide adequate airflow to your system.

### Expansion Slots

- Two PCI-E x16 slot (Slot3 and Slot6)
- One PCI-E x4 slot (Slot2)
- Three 32-bit PCI 33 slot (Slot1, Slot4 and Slot5)
- One SIMLC IPMI Slot (Slot0)

**Note:** IPMI 2.0 is supported by the motherboard. To use this feature, please install a SIMLC add-on card on the SIMLC Slot (Slot 0). For more information, please refer to the AOC-SIMLC User Guide @ <http://www.supermicro.com/products/accessories/addon/SIM.cfm>.

### BIOS

- 32 Mb AMI SPI Flash ROM
- PCI 2.2, ACPI 1.0/2.0/3.0, Plug and Play (PnP), DMI 2.3, USB Keyboard support, and SMBIOS 2.3

### PC Health Monitoring

- Onboard voltage monitors for CPU cores, chipset voltage, 3.3Vcc, 12V, V\_DIMM, 5V, -12V, 3.3VSB, and Vbatt
- Fan status monitor and Pulse Width Modulation (PWM) Fan Control
- CPU/chassis temperature monitors
- Platform Environment Control Interface (PECI) ready and Thermal Monitor 2 (TM2) support
- CPU fan auto-off in sleep mode/CPU slow-down on temperature overheat
- CPU thermal trip support for processor protection, power LED
- Power-up mode control for recovery from AC power loss

- Auto-switching voltage regulator for CPU cores
- System overheat/Fan Fail LED Indicator and control
- Chassis intrusion detection
- System resource alert via Supero Doctor III

### **ACPI Features**

- Slow blinking LED for suspend state indicator
- Main switch override mechanism
- ACPI Power Management
- Keyboard Wakeup from Soft-off

### **Onboard I/O**

- Intel ICH10R supports six SATA2 ports (with RAID0, RAID1, RAID10, RAID5 supported in the Windows OS Environment)
- LSI 1068E supports eight SAS ports (with RAID0, RAID1, RAID10 supported) (For X8DA3)

**Note:** SAS RAID5 is also supported when the AOC-Ibutton 68 (optional) is installed on the motherboard.

- One SIMLC IPMI socket
- Intel 82573V and 82573L Gigabit Ethernet controllers support dual Giga-bit LAN ports
- One floppy port interface
- Two COM ports
- PS/2 mouse and PS/2 keyboard ports
- Up to ten USB 2.0 (Universal Serial Bus) (4 Ports, 2 Front Headers, and 2 Type A Headers)
- Super I/O: Winbond W83627HG
- High Definition 7.1 Audio with Line-in, Line-out and Microphone
- Two TI 1394 ports

### **Other**

- Wake-on-LAN (WOL)
- Console redirection
- Onboard Fan Speed Control by Thermal Management via BIOS

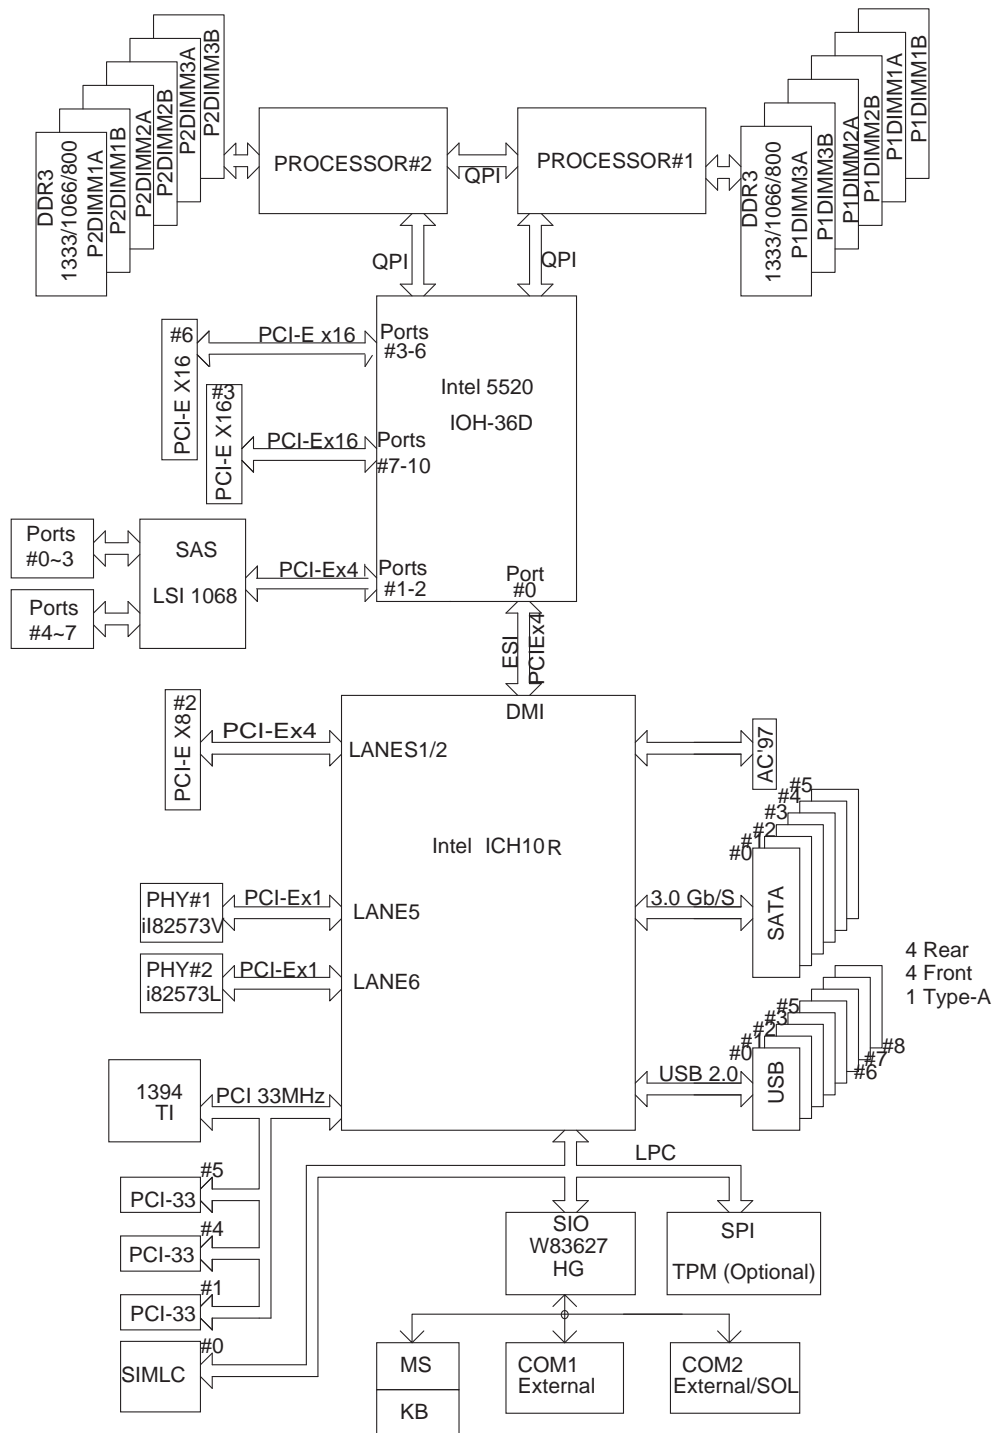

### **CD/Diskette Utilities**

- BIOS flash upgrade utility and device drivers

### **Dimensions**

- Ext. ATX 13.05" (L) x 12.075" (W) (331.47 mm x 306.71 mm)

## Block Diagram of the Intel 5520 Platform

 **Note:** This is a general block diagram. Please see the previous Motherboard features pages for details on the features of each motherboard.

## 1-2 Chipset Overview

Built upon the functionality and the capability of the Intel 5520 platform, the X8DA3/X8DAi motherboard provides the performance and feature set optimized for dual-processor-based high-end workstations, CAD systems and intensive-application platforms. The 5500/5600 Series Processor platform consists of the 5500/5600 Series Processor (LGA 1366) processor, the IOH-36D, and the ICH10R (South Bridge). With the Intel QuickPath interconnect controller built in, the 5500/5600 Series Processor platform is the first dual-processing platform that offers the next generation point-to-point interconnect interface, replacing the current Front Side Bus Technology, providing substantial performance enhancement by utilizing serial link interconnections with increased bandwidth and scalability.

The IOH-36D connects to each processor through an independent QuickPath Interconnect link. Each link consists of 20 pairs of unidirectional differential lanes for transmission and receiving in addition to a differential forwarded clock. A full-width QuickPath interconnect link pair provides 84 signals. Each processor supports two QuickPath links, one going to the other processor, and the other to the 5520 chip.

The Intel 5520 platform supports up to 36 PCI Express Gen2 lanes, and the 5520 IOH-36D supports peer-to-peer read and write transactions. The ICH10R provides up to 6 PCI-Express ports, six SATA ports and nine USB connections.

In addition, the Intel 5520 platform also offers a wide range of RAS (Reliability, Availability and Serviceability) features. These features include memory interface ECC, x4/x8 Single Device Data Correction (SDDC), Cyclic Redundancy Check (CRC), parity protection, out-of-band register access via SMBus, memory mirroring, memory sparing, and Hot-plug support on the PCI-Express Interface.

### **Features of the 5500/5600 Processor and the 5520Chipset**

- Four processor cores in each processor with 8MB shared cache among cores
- Two full-width Intel QuickPath interconnect links, up to 6.4 GT/s of data transfer rate in each direction
- Virtualization Technology, Integrated Management Engine supported
- Point-to-point cache coherent interconnect, Fast/narrow unidirectional links, and Concurrent bi-directional traffic
- Error detection via CRC and Error correction via Link level retry

## 1-3 Special Features

### Recovery from AC Power Loss

BIOS provides a setting for you to determine how the system will respond when AC power is lost and then restored to the system. You can choose for the system to remain powered off (in which case you must press the power switch to turn it back on) or for it to automatically return to a power - on state. See the Advanced BIOS Setup section to change this setting. The default setting is **Last State**.

## 1-4 PC Health Monitoring

This section describes the PC health monitoring features of the X8DA3/X8DAi. All have an onboard System Hardware Monitor chip that supports PC health monitoring. An onboard voltage monitor will scan these onboard voltages continuously: CPU cores, chipset voltage, 3.3Vcc, 12V, V\_DIMM, 5V, -12V, 3.3VSB, and Vbatt. Once a voltage becomes unstable, a warning is given or an error message is sent to the screen. Users can adjust the voltage thresholds to define the sensitivity of the voltage monitor.

### Fan Status Monitor with Firmware Control

The PC health monitor can check the RPM status of the cooling fans. The onboard CPU and chassis fans are controlled by Thermal Management in the BIOS (under System Health Monitoring in the Advanced section.)

### Environmental Temperature Control

The thermal control sensor monitors the CPU temperature in real time and will turn on the thermal control fan whenever the CPU temperature exceeds a user-defined threshold. The overheat circuitry runs independently from the CPU. Once it detects that the CPU temperature is too high, it will automatically turn on the thermal fan control to prevent any overheat damage to the CPU. The onboard chassis thermal circuitry can monitor the overall system temperature and alert users when the chassis temperature is too high.

**Warning:** To avoid possible system overheating, please be sure to provide adequate airflow to your system.

### System Resource Alert

This feature is available when used with Supero Doctor III in the Windows OS environment or used with Supero Doctor II in Linux. Supero Doctor is used to

notify the user of certain system events. For example, you can also configure Supero Doctor to provide you with warnings when the system temperature, CPU temperatures, voltages and fan speeds go beyond a pre-defined range.

## 1-5 ACPI Features

ACPI stands for Advanced Configuration and Power Interface. The ACPI specification defines a flexible and abstract hardware interface that provides a standard way to integrate power management features throughout a PC system, including its hardware, operating system and application software. This enables the system to automatically turn on and off peripherals such as CD-ROMs, network cards, hard disk drives and printers.

In addition to enabling operating system-directed power management, ACPI provides a generic system event mechanism for Plug and Play and an operating system-independent interface for configuration control. ACPI leverages the Plug and Play BIOS data structures while providing a processor architecture-independent implementation that is compatible with Windows XP/Windows 2003/Windows 2008/Windows Vista Operating Systems.

### Slow Blinking LED for Suspend-State Indicator

When the CPU goes into a suspend state, the chassis power LED will start blinking to indicate that the CPU is in suspend mode. When the user presses any key, the CPU will wake-up and the LED will automatically stop blinking and remain on.

### Wake-On-LAN (WOL)

Wake-On-LAN is defined as the ability of a management application to remotely power up a computer that is powered off. Remote PC setup, up-dates and asset tracking can occur after hours and on weekends so that daily LAN traffic is kept to a minimum and users are not interrupted. The motherboard has a 3-pin header (WOL) to connect to the 3-pin header on a Network Interface Card (NIC) that has WOL capability. In addition, an onboard LAN controller can also support WOL without any connection to the WOL header. The 3-pin WOL header is to be used with a LAN add-on card only.

**Note:** Wake-On-LAN requires an ATX 2.01 (or above) compliant power supply.

## 1-6 Power Supply

As with all computer products, a stable power source is necessary for proper and reliable operation. It is even more important for processors that have high CPU clock rates.

The X8DA3/X8DAi can accommodate 24-pin ATX power supplies. Although most power supplies generally meet the specifications required by the CPU, some are inadequate. In addition, the two onboard 12V 8-pin power connections are also required to ensure adequate power supply to the system. Also your power supply must supply 1.5A for the Ethernet ports.

**Warning:** To prevent damage to your power supply or motherboard, please use a power supply that contains a 24-pin and two 8-pin power connectors. Be sure to connect these power connectors to the 24-pin and the two 8-pin power connectors on your motherboard for adequate power supply to your system. Failure to do so will void the manufacturer warranty on your power supply and motherboard.

It is strongly recommended that you use a high quality power supply that meets ATX power supply Specification 2.02 or above. It must also be SSI compliant (For more information, please refer to the web site at <http://www.ssiforum.org/>). Additionally, in areas where noisy power transmission is present, you may choose to install a line filter to shield the computer from noise. It is recommended that you also install a power surge protector to help avoid problems caused by power surges.

## 1-7 Super I/O

The disk drive adapter functions of the Super I/O chip include a floppy disk drive controller that is compatible with industry standard 82077/765, a data separator, write pre-compensation circuitry, decode logic, data rate selection, a clock generator, drive interface control logic and interrupt and DMA logic. The wide range of functions integrated onto the Super I/O greatly reduces the number of components required for interfacing with floppy disk drives. The Super I/O supports 360 K, 720 K, 1.2 M, 1.44 M or 2.88 M disk drives and data transfer rates of 250 Kb/s, 500 Kb/s or 1 Mb/s. It also provides two high-speed, 16550 compatible serial communication ports (UARTs). Each UART includes a 16-byte send/receive FIFO, a programmable baud rate generator, complete modem control capability and a processor interrupt system. Both UARTs provide legacy speed with baud rate of up to 115.2 Kbps as well as an advanced speed with baud rates of 250 K, 500 K, or 1 Mb/s, which support higher speed modems.

The Super I/O provides functions that comply with ACPI (Advanced Configuration and Power Interface), which includes support of legacy and ACPI power management through an SMI or SCI function pin. It also features auto power management to reduce power consumption.

## Chapter 2

### Installation

#### 2-1 Static-Sensitive Devices

Electrostatic Discharge (ESD) can damage electronic components. To prevent damage to your system board, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.

##### Precautions

- Use a grounded wrist strap designed to prevent static discharge.
- Touch a grounded metal object before removing the board from the antistatic bag.
- Handle the board by its edges only; do not touch its components, peripheral chips, memory modules or gold contacts.
- When handling chips or modules, avoid touching their pins.
- Put the motherboard and peripherals back into their antistatic bags when not in use.
- For grounding purposes, make sure your computer chassis provides excellent conductivity between the power supply, the case, the mounting fasteners and the motherboard.
- Use only the correct type of onboard CMOS battery as specified by the manufacturer. Do not install the onboard battery upside down to avoid possible explosion.

##### Unpacking

The motherboard is shipped in antistatic packaging to avoid static damage. When unpacking the board, make sure the person handling it is static protected.

## 2-2 Motherboard Installation

All motherboards have standard mounting holes to fit different types of chassis. Make sure that the locations of all the mounting holes for both motherboard and chassis match. Although a chassis may have both plastic and metal mounting fasteners, metal ones are highly recommended because they ground the motherboard to the chassis. Make sure that the metal standoffs click in or are screwed in tightly. Then use a screwdriver to secure the motherboard onto the motherboard tray. **Note:** Some components are very close to the mounting holes. Please take precautionary measures to prevent damage to these components when installing the motherboard to the chassis.

Locations of Mounting Holes

### Tools Needed

1. Phillips Screwdriver
2. Pan head #9 screws

### Installation Instructions

1. Install the IO shield into the chassis.
2. Locate the mounting holes on the motherboard. Refer to the layout above for mounting hole locations.
3. Locate the matching mounting holes on the chassis. Align the mounting holes on the motherboard against the mounting holes on the chassis.
4. Install standoffs in the chassis as needed.
5. Install the motherboard into the chassis carefully to avoid damage to motherboard components.

**Warning:** To avoid damaging the motherboard and its components, please do not apply any force greater than 8 *lb/sq.in* (8 lbs. per square inch) when installing a screw into a mounting hole.

6. Insert a Pan head #6 screw into a mounting hole on the motherboard and its matching mounting hole on the chassis, using a Phillips screwdriver.
7. Repeat Step 4 to insert #6 screws to all mounting holes.
8. Make sure that the motherboard is securely placed on the chassis.

## 2-3 Processor and Heatsink Installation

When handling the processor package, avoid placing direct pressure on the label area of the fan.

### Notes:

1. Always connect the power cord last and always remove it before adding, removing or changing any hardware components. Make sure that you install the processor into the CPU socket before you install the CPU heatsink.
2. Make sure to install the motherboard into the chassis before you install the CPU heatsink and heatsink fans.
3. When purchasing a motherboard with a 5500/5600 Series Processor pre-installed, make sure that the CPU socket plastic cap is in place, and none of the CPU socket pins are bent; otherwise, contact the retailer immediately.
4. Refer to the MB Features Section for more details on CPU support.

### Installing an LGA 1366 Processor

1. Press the socket clip to release the load plate, which covers the CPU socket, from its locking position.
2. Gently lift the socket clip to open the load plate.
3. Hold the plastic cap at its north and south center edges to remove it from the CPU socket.

**Socket Clip**      **Load Plate**

**Plastic Cap**

**Hold the north & south edges of the plastic cap to remove it**

1. After removing the plastic cap, using your thumb and the index finger, hold the CPU at the north and south center edges.
2. Align the CPU key, the semi-circle cutout, against the socket key, the notch below the gold color dot on the side of the socket.
3. Once both the CPU and the socket are aligned, carefully lower the CPU straight down into the socket. (Do not rub the CPU against the surface of the socket or its pins to avoid damaging the CPU or the socket.)
4. With the CPU inside the socket, inspect the four corners of the CPU to make sure that the CPU is properly installed.
5. Once the CPU is securely seated on the socket, lower the CPU load plate to the socket.
6. Use your thumb to gently push the socket clip down to the clip lock.

**Warning:** Please save the plastic cap. The motherboard must be shipped with the plastic cap properly installed to protect the CPU socket pins. Shipment without the plastic cap properly installed will cause damage to the socket pins.

## Installing a CPU Heatsink

1. Do not apply any thermal grease to the heatsink or the CPU die because the required amount has already been applied.
2. Place the heatsink on top of the CPU so that the four mounting holes are aligned with those on the retention mechanism.
3. Install two diagonal screws (ie the #1 and the #2 screws) and tighten them until just snug (-do not fully tighten the screws to avoid possible damage to the CPU.)
4. Finish the installation by fully tightening all four screws.

Install Screw#1

## Removing the Heatsink

**Warning:** We do not recommend that the CPU or the heatsink be removed. However, if you do need to remove the heatsink, please follow the instructions below to uninstall the heatsink and prevent damage to the CPU or other components.

1. Unplug the power cord from the power supply.
2. If you are using an active heat-sink, disconnect the heatsink fan wires from the CPU fan header.
3. Using a screwdriver, loosen and remove the heatsink screws from the motherboard in the sequence as show in the picture on the right.
4. Hold the heatsink as shown in the picture on the right and gently wriggle the heatsink to loosen it from the CPU. (Do not use excessive force when wriggling the heatsink.)
5. Once the heatsink is loosened, remove it from the CPU socket.
6. To reinstall the CPU and the heatsink, clean the surface of the CPU and the heatsink to get rid of the old thermal grease. Reapply the proper amount of thermal grease on the surface before reinstalling them on the motherboard.

Using a screwdriver to  
remove Screw#1

Remove Screw#2

## 2-4 Memory Installation

**Note:** Check the Supermicro web site for recommended memory modules.

### CAUTION

Exercise extreme care when installing or removing DIMM modules to prevent any possible damage. Also note that the memory is interleaved to improve performance (See step 1).

### DIMM Installation

1. Insert the desired number of DIMMs into the memory slots, starting with P1-DIMM 1A. For best memory performance, please install memory modules of the same type and same speed on the memory slots as indicated on the tables below. (See the Memory Installation Table Below.)
2. Insert each DIMM module vertically into its slot. Pay attention to the notch along the bottom of the module to prevent inserting the DIMM module incorrectly.
3. Gently press down on the DIMM module until it snaps into place in the slot. Repeat for all modules.

Memory Population for Optimal Performance -For a motherboard with One CPU (CPU1) installed						
	Branch 0		Branch 1		Branch 2	
3 DIMMs	P1 DIMM1A		P1 DIMM2A		P1 DIMM3A	
6 DIMMs	P1 DIMM1A	P1 DIMM1B	P1 DIMM2A	P1 DIMM2B	P1 DIMM3A	P1 DIMM3B

Memory Population for Optimal Performance -For a motherboard with One CPU (CPU2) installed						
	Branch 0		Branch 1		Branch 2	
3 DIMMs	P2 DIMM1A		P2 DIMM2A		P2 DIMM3A	
6 DIMMs	P2 DIMM1A	P2 DIMM1B	P2 DIMM2A	P2 DIMM2B	P2 DIMM3A	P2 DIMM3B

Memory Population for Optimal Performance -For a motherboard with Two CPUs installed												
	CPU1						CPU2					
	Branch 0		Branch 1		Branch 2		Branch 0		Branch 1		Branch 2	
6 DIMMs	1A		2A		3A		1A		2A		3A	
12 DIMMs	1A	1B	2A	2B	3A	3B	1A	1B	2A	2B	3A	3B

## Memory Support

The X8DA3/X8DAi supports up to 96 GB DDR3 Registered ECC or 48 GB Unbuff. ECC/Non ECC 1333 MHz/1066 MHz/800 MHz in 12 DIMMs. Memory speed support is dependent on the type of CPU used on the board.

### *DIMM Module Population Configuration*

For memory to work properly, follow the tables below for memory installation.

#### *Memory Support for the Motherboard w/5500 Processors Installed*

<b>RDIMM Population for the Motherboard with 5500 Processors Installed</b>				
DIMM Slots per Channel	DIMMs Populated per Channel	DIMM Type (Reg.= Registered)	Speeds (in MHz)	Ranks per DIMM (any combination; SR=Single Rank, DR=Dual Rank, QR=Quad Rank)
2	1	Reg. DDR3 ECC	800,1066,1333	SR or DR
2	1	Reg. DDR3 ECC	800,1066 (Note 1)	QR
2	2	Reg. DDR3 ECC	800,1066 (Note 1)	Mixing SR, DR
2	2	Reg. DDR3 ECC	800 (Note 2)	Mixing SR, DR, QR
<b>Note 1:</b> 1333 RDIMMs will run at 1066 MHz (-BIOS automatic downgrading).				
<b>Note 2:</b> 1333/1066 RDIMMs will run at 800 MHz (-BIOS automatic downgrading).				

<b>UDIMM Population for the Motherboard with 5500 Processors Installed</b>				
DIMM Slots per Channel	DIMMs Populated per Channel	DIMM Type (Unb.= Unbuffered)	Speeds (in MHz)	Ranks per DIMM (any combination; SR=Single Rank, DR=Dual Rank, QR=Quad Rank)
2	1	Unb. DDR3 ECC/Non-ECC	800,1066,1333	SR or DR
2	2	Unb. DDR3 ECC/Non-ECC	800,1066 (Note)	Mixing SR, DR
<b>Note:</b> 1333 UDIMMs will run at 800 MHz (-BIOS automatic downgrading)				

#### *Memory Support for the Motherboard w/5600 Processors Installed*

##### 1.5V DIMMs

<b>1.5V RDIMM Population for the Motherboard w/5600 Processors Installed</b>				
DIMM Slots per Channel	DIMMs Populated per Channel	DIMM Type (Reg.= Registered)	Speeds (in MHz)	Ranks per DIMM (any combination; SR=Single Rank, DR=Dual Rank, QR=Quad Rank)
2	1	Reg. DDR3 ECC	800,1066,1333	SR or DR
2	1	Reg. DDR3 ECC	800 , 1066 (Note 1)	QR
2	2	Reg. DDR3 ECC	800,1066, 1333	Mixing SR, DR
2	2	Reg. DDR3 ECC	800 (Note 2)	Mixing SR, DR, QR

**1.5V RDIMM Population for the Motherboard w/5600 Processors Installed**

**Note 1:** 1333 RDIMMs MHz will run at 1066 MHz (-BIOS automatic downgrading)

**Note 2:** 1333/1066 RDIMMs MHz will run at 800 MHz (-BIOS automatic downgrading)

**Note 3:** Mixing of 1.35V and 1.5V DIMMs is not recommended.

**1.5V UDIMM Population for the Motherboard w/5600 Processors Installed**

DIMM Slots per Channel	DIMMs Populated per Channel	DIMM Type (Unb.= Unbuffered)	Speeds (in MHz)	Ranks per DIMM (any combination; SR=Single Rank, DR=Dual Rank, QR=Quad Rank)
2	1	Unb. DDR3 ECC/Non-ECC	800,1066,1333	SR or DR
2	2	Unb. DDR3 ECC/Non-ECC	800,1066, 1333	Mixing SR, DR

**Note 1:** 1333 MHz for two DIMMs per channel is supported when Unbuf./ECC DIMMs are used.

**Note 2:** Mixing of 1.35V and 1.5V DIMMs is not recommended.

**1.35V DIMMs****1.35V RDIMM Population for the Motherboard w/5600 Processors Installed**

DIMM Slots per Channel	DIMMs Populated per Channel	DIMM Type (Reg.= Registered)	Speeds (in MHz)	Ranks per DIMM (any combination; SR=Single Rank, DR=Dual Rank, QR=Quad Rank)
2	1	Reg. DDR3 ECC	800,1066,1333	SR or DR
2	1	Reg. DDR3 ECC	800 (Note 1)	QR
2	2	Reg. DDR3 ECC	800,1066 (Note 2)	Mixing SR, DR
2	2	Reg. DDR3 ECC	800 (Note 3)	Mixing SR, DR, QR

**Note 1:** 1333/1066 QR RDIMMs MHz will run at 800 MHz (-BIOS automatic downgrading)

**Note 2:** 1333 SR/DR RDIMMs MHz will run at 800 MHz (-BIOS automatic downgrading)

**Note 3:** 1333 SR/DR/QR RDIMMs MHz will run at 800 MHz (-BIOS automatic downgrading)

**Note 4:** Mixing of 1.35V and 1.5V DIMMs is not recommended.

**1.35V UDIMM Population for the Motherboard w/5600 Processors Installed**

DIMM Slots per Channel	DIMMs Populated per Channel	DIMM Type (Unb.= Unbuffered)	Speeds (in MHz)	Ranks per DIMM (any combination; SR=Single Rank, DR=Dual Rank, QR=Quad Rank)
2	1	Unb. DDR3 ECC	800,1066,1333	SR or DR
2	2	Unb. DDR3 ECC	800,1066	Mixing SR, DR

**Note 1:** 1333 MHz for two DIMMs per channel is supported when Unbuf./ECC DIMMs are used.

**Note 2:** Mixing of 1.35V and 1.5V DIMMs is not recommended.

**Note 1:** Due to OS limitations, some operating systems may not show more than 4 GB of memory.

**Note 2:** Due to memory allocation to system devices, the amount of memory that remains available for operational use will be reduced when 4 GB of RAM is used. The reduction in memory availability is disproportional. (See the following Memory Availability Table.)

Possible System Memory Allocation & Availability		
System Device	Size	Physical Memory Remaining (-Available) (4 GB Total System Memory)
Firmware Hub flash memory (System BIOS)	1 MB	3.99 GB
Local APIC	4 KB	3.99 GB
Area Reserved for the chipset	2 MB	3.99 GB
I/O APIC (4 Kbytes)	4 KB	3.99 GB
PCI Enumeration Area 1	256 MB	3.76 GB
PCI Express (256 MB)	256 MB	3.51 GB
PCI Enumeration Area 2 (if needed) -Aligned on 256-MB boundary-	512 MB	3.01 GB
VGA Memory	16 MB	2.85 GB
TSEG	1 MB	2.84 GB
Memory available for the OS & other applications		2.84 GB

## Installing and Removing DIMMs

**To Install:** Insert module vertically and press down until it snaps into place. Pay attention to the alignment notch at the bottom.

### To Remove:

Use your thumbs to gently push the release tabs near both ends of the module. This should release it from the slot.

### Top View of DDR3 Slot

## 2-5 Control Panel Connectors/IO Ports

The I/O ports are color coded in conformance with the PC 99 specification. See the picture below for the colors and locations of the various I/O ports.

### 1. Back Panel Connectors/IO Ports

**Back Panel I/O Port Locations and Definitions**

#### Back Panel Connectors

1. Keyboard (Purple)
2. PS/2 Mouse (Green)
3. Back Panel USB Port 0
4. Back Panel USB Port 1
5. Back Panel USB Port 2
6. Back Panel USB Port 3
7. COM Port 1 (Turquoise)
8. COM Port 2 (Turquoise)
9. Gigabit LAN 1
10. Gigabit LAN 2
11. Side\_Surround (Grey)
12. Back\_Surround (Black)
13. CEN/LFE (Orange)
14. Microphone-In (Pink)
15. Front (Green)
16. Line-In (Blue)

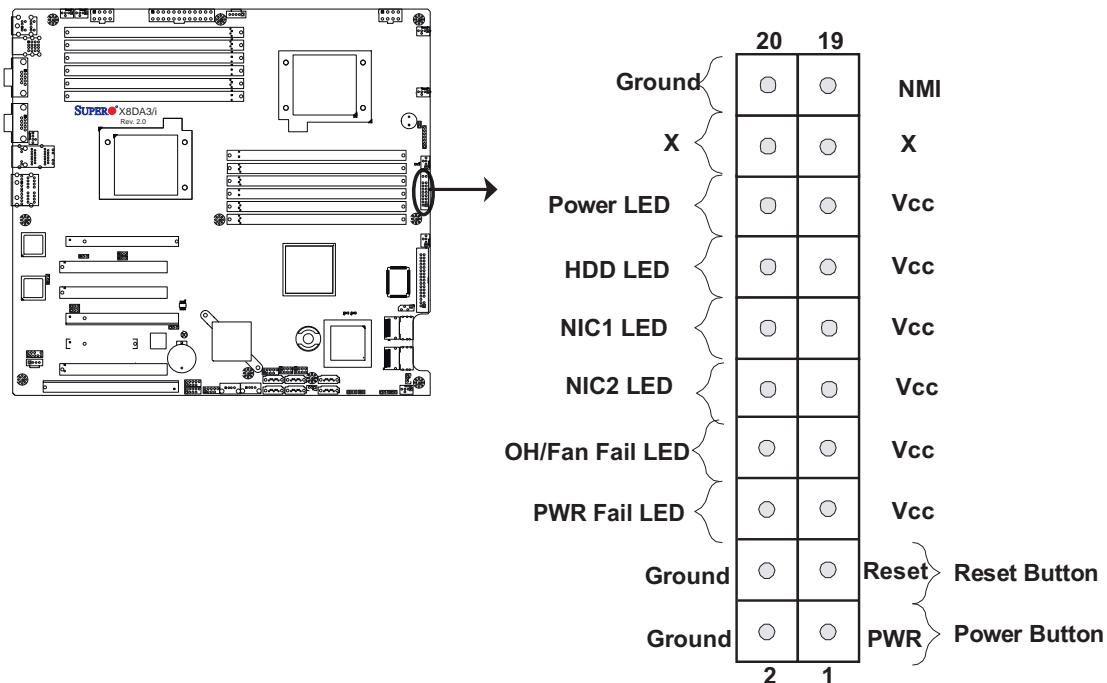

(See Section 2-5 for details.)

## 2. Front Control Panel

JF1 contains header pins for various buttons and indicators that are normally located on a control panel at the front of the chassis. These connectors are designed specifically for use with Supermicro server chassis. See the figure below for the descriptions of the various control panel buttons and LED indicators. Refer to the following section for descriptions and pin definitions.

**JF1 Header Pins**

### 3. Front Control Panel Pin Definitions

#### NMI Button

The non-maskable interrupt button header is located on pins 19 and 20 of JF1. Refer to the table on the right for pin definitions.

NMI Button Pin Definitions (JF1)	
Pin#	Definition
19	Control
20	Ground

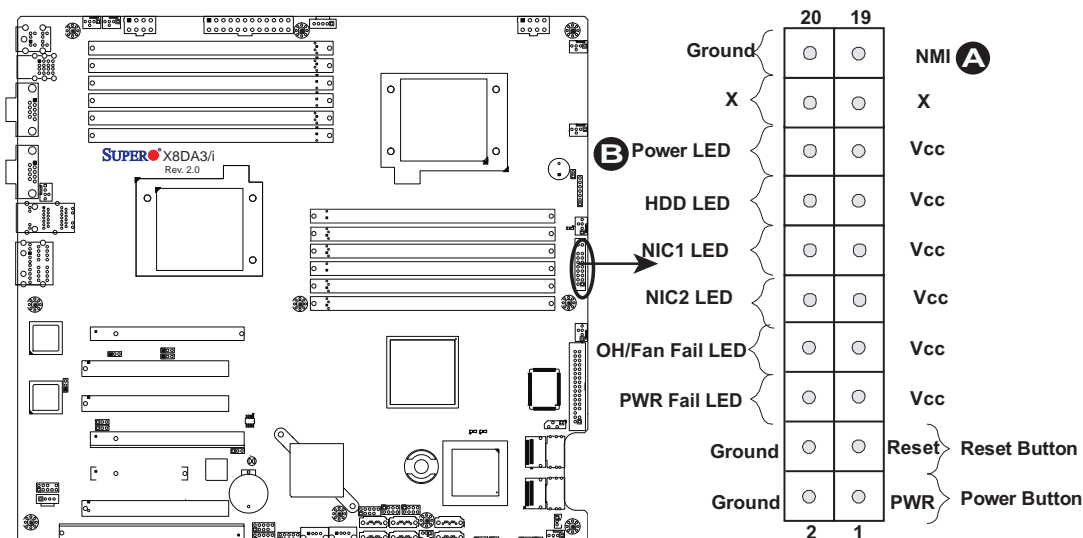

#### Power LED

The Power LED connection is located on pins 15 and 16 of JF1. Refer to the table on the right for pin definitions.

Power LED Pin Definitions (JF1)	
Pin#	Definition
15	+5V
16	Ground

A. NMI

B. PWR LED

## HDD LED

The HDD LED connection is located on pins 13 and 14 of JF1. Attach a hard drive LED cable here to display disk activity (for any hard drive activities on the system, including SAS, Serial ATA and IDE). See the table on the right for pin definitions.

HDD LED Pin Definitions (JF1)	
Pin#	Definition
13	+5V
14	HD Active

## NIC1/NIC2 LED Indicators

The NIC (Network Interface Controller) LED connection for GLAN port 1 is located on pins 11 and 12 of JF1, and the LED connection for GLAN Port 2 is on Pins 9 and 10. Attach the NIC LED cables to display network activity. Refer to the table on the right for pin definitions.

GLAN1/2 LED Pin Definitions (JF1)	
Pin#	Definition
9/11	Vcc
10/12	Ground

## Overheat (OH)/Fan Fail LED

Connect an LED Cable to the OH/ Fan Fail connection on pins 7 and 8 of JF1 to provide advanced warnings of chassis overheating or fan failure. Refer to the table on the right for pin definitions.

OH/Fan Fail LED Pin Definitions (JF1)	
Pin#	Definition
7	Vcc
8	Ground

OH/Fan Fail Indicator Status	
State	Definition
Off	Normal
On	Overheat
Flash- ing	Fan Fail

## Power Fail LED

The Power Supply Fail LED connection is located on pins 5 and 6 of JF1. Refer to the table on the right for pin definitions.

PWR Fail LED Pin Definitions (JF1)	
Pin#	Definition
5	Vcc
6	Ground

A. OH/Fan Fail LED

B. PWR Supply Fail

## Reset Button

The Reset Button connection is located on pins 3 and 4 of JF1. Attach it to a hardware reset switch on the computer case. Refer to the table on the right for pin definitions.

Reset Button Pin Definitions (JF1)	
Pin#	Definition
3	Reset
4	Ground

## Power Button

The Power Button connection is located on pins 1 and 2 of JF1. Momentarily contacting both pins will power on/off the system. This button works in conjunction with the Power-Off setting in the BIOS Advanced submenu. Refer to the tables on the right for pin definitions.

Power Button Pin Definitions (JF1)	
Pin#	Definition
1	Signal
2	Ground

Power Button Power On/Off Settings	
PWR_Off Setting in the BIOS:	PWR Activity on the motherboard:
When PWR_Off is set to Instant_Off	To power-on: Power is turned on immediately To power-off: PWR is turned off immediately
When PWR_Off is set to 4_second suspend	To power-on: Power is turned on immediately To power-off: Short both pins for 4 seconds or longer to turn off the power.

A. Reset Button

B. PWR Button

## 2-6 Connecting Cables

### ATX Power Connector

There are a 24-pin main power supply connector(JPW3) and two 8-pin CPU PWR connectors (JPW1/JPW2) on the motherboard. These power connectors meet the SSI EPS 12V specification. For the 8-pin PWR (JPW1/JPW2), please refer to the item listed below.

### Processor Power Connector

In addition to the Primary ATX power connector, the 12V 8-pin CPU PWR connectors at JPW1/JPW2 must also be connected to your power supply. See the table on the right for pin definitions.

ATX Power 24-pin Connector Pin Definitions			
Pin#	Definition	Pin #	Definition
13	+3.3V	1	+3.3V
14	-12V	2	+3.3V

24	COM	12	+3.3V

**12V 8-pin Power Connector  
Pin Definitions**

Pins	Definition
1 through 4	Ground
5 through 8	+12V

**Warning:** To prevent damage to your power supply or motherboard, please use a power supply that contains a 24-pin and two 8-pin power connectors. Be sure to connect these power connectors to the 24-pin and the two 8-pin power connectors on your motherboard for adequate power supply to your system. Failure to do so will void the manufacturer warranty on your power supply and motherboard.

A. 24-pin ATX PWR

B/C. 8-pin Processor PWR  
(Required)

## Universal Serial Bus (USB)

There are ten USB 2.0 (Universal Serial Bus) ports/headers on the motherboard. Back Panel USB Ports 0/1/2/3 are located at JUSB1. The other six are Front Panel Accessible USB headers. USB 4/5 (JUSB 2), USB 6/7 (JUSB 3), USB 8 (J24) and USB 9 (J23) provide front panel USB access. See the tables on the right for pin definitions.

## Fan Headers

The X8DA3/X8DAi has six chassis/system fan headers (Fan1 to Fan6) and two CPU fans (Fan7/Fan8) on the motherboard. All these 4-pin fans headers are backward compatible with the traditional 3-pin fans. However, fan speed control is available for 4-pin fans only. The fan speeds are controlled by a Hardware Monitoring setting in the BIOS. (The Default setting is Disabled.) See the table on the right for pin definitions.

Fan Header Pin Definitions

## GLAN 1/2 (Giga-bit Ethernet Ports)

Two G-bit Ethernet ports are located on the I/O backplane. These ports accept RJ45 type cables.

GLAN2

GLAN1

## T-SGPIO Headers

Two SGPIO (Serial-Link General Purpose Input/Output) headers (T-SGPIO-1/T-SGPIO-2) are located at J14/J15 on the motherboard. These headers support serial link interfaces for the onboard SATA and SAS connectors. See the table on the right for pin definitions. Refer to the board layout below for the location.

T-SGPIO Pin Definitions			
Pin#	Definition	Pin	Definition
1	NC	2	NC
3	Ground	4	Data
5	Load	6	Ground
7	NC	8	NC

**Note:** NC= No Connections

A. GLAN1/2

B. T-SGPIO-1

C. T-SGPIO-2

## Power SMB (I<sup>2</sup>C) Connector

Power System Management Bus (I<sup>2</sup>C) Connector (JPI<sup>2</sup>C) monitors power supply, fan and system temperatures. See the table on the right for pin definitions.

B. SMB

## High Definition Audio (HD Audio)

This motherboard features a 7.1+2 Channel High Definition Audio (HDA) codec that provides 10DAC channels, simultaneously supporting 7.1 sound playback with 2 channels of independent stereo sound outputs. The multiple\_streaming outputs are routed through the front panel stereo out for front L&R, rear L&R, center and subwoofer speakers. Use the software included in the CD-ROM that came with your motherboard to enable this function.

CD1 Pin Definition	
Pin#	Definition
1	Left
2	Ground
3	Ground
4	Right

## CD Header/Front Panel Audio

A 4-pin CD header (CD1) and a Front Panel Audio header (JC2) are also located on the motherboard. These headers allow you to use the onboard sound for audio CD playback. Connect an audio cable from your CD drive to the CD header that fits your cable's connector. Only one CD header can be used at a time. See the tables at right for pin definitions.

## CNF1/CNF2 Connection

CNF1/CNF2 provide the IEEE 1394a connections on the motherboard. See the tables on the right for pin definitions.

CNF1 Pin Definitions			
Pin#	Defin.	Pin#	Defin
1	PTPA0+	2	PTPA0-
3	GND	4	GND
5	PTPB0+	6	PTPB0-
7	PWR 1394a	8	PWR 1394a
		10	ZX

  

CNF2 Pin Definitions			
Pin#	Defin.	Pin#	Defin
1	PTPA1+	2	PTPA1-
3	GND	4	GND
5	PTPB1+	6	PTPB1-
7	PWR 1394a	8	PWR 1394a
		10	ZY

### Compact Flash Card PWR Connector

A Compact Flash Card Power Connector is located at JWF1. For the Compact Flash Card to work properly, you will need to first connect the Compact Flash Card power cable to JWF1. Refer to the board layout below for the location.

Compact Flash Card PWR Connector	
Setting	Definition
On	Compact Flash Power On (Default)
Off	Compact Flash Power Off

- A. CNF1
- B. CNF2
- C. Compact Flash PWR

## 2-7 Jumper Settings

### Explanation of Jumpers

To modify the operation of the motherboard, jumpers can be used to choose between optional settings. Jumpers create shorts between two pins to change the function of the connector. Pin 1 is identified with a square solder pad on the printed circuit board. See the motherboard layout pages for jumper locations.

**Note:** On two pin jumpers, "Closed" means the jumper is on and "Open" means the jumper is off the pins.

### GLAN Enable/Disable

JPL1/JPL2 enable or disable the GLAN Port1/GLAN Port2 on the motherboard. See the table on the right for jumper settings. The default setting is **Enabled**.

GLAN Enable Jumper Settings	
Pin#	Definition
1-2	Enabled (default)
2-3	Disabled

A. GLAN Port 1 Enable

B. GLAN Port 2 Enable

## CMOS Clear

JBT1 is used to clear CMOS. Instead of pins, this "jumper" consists of contact pads to prevent the accidental clearing of CMOS. To clear CMOS, use a metal object such as a small screwdriver to touch both pads at the same time to short the connection. Always remove the AC power cord from the system before clearing CMOS.

**Note:** For an ATX power supply, you must completely shut down the system, remove the AC power cord and then short JBT1 to clear CMOS.

## Watch Dog Enable/Disable

Watch Dog (JWD1) is a system monitor that can reboot the system when a software application hangs. Close Pins 1-2 to reset the system if an application hangs. Close Pins 2-3 to generate a non-maskable interrupt signal for the application that hangs. See the table on the right for jumper settings. Watch Dog must also be enabled in the BIOS.

Watch Dog Jumper Settings (JWD1)	
Jumper Setting	Definition
Pins 1-2	Reset (default)
Pins 2-3	NMI
Open	Disabled

A. Clear CMOS

B. Watch Dog Enable

### I<sup>2</sup>C Bus to PCI-Exp. Slots

Jumpers JI<sup>2</sup>C1 and JI<sup>2</sup>C2 allow you to connect the System Management Bus (I<sup>2</sup>C) to PCI-Express slots. The default setting is Open to disable the connection. See the table on the right for jumper settings.

I <sup>2</sup> C to PCI-Exp Jumper Settings	
Jumper Setting	Definition
1-2	Enabled
2-3	Disabled (Default)

### I<sup>2</sup>C Bus to PCI-X Slots

Jumpers JI<sup>2</sup>C3, and JI<sup>2</sup>C4 allow you to connect the System Management Bus (I<sup>2</sup>C) to PCI-X slots. The default setting is Open to disable the connection. See the table on the right for jumper settings.

I <sup>2</sup> C to PCI-X Jumper Settings	
Jumper Setting	Definition
1-2	Enabled
2-3	Disabled (Default)

- A. JI<sup>2</sup>C1
- B. JI<sup>2</sup>C2
- C. JI<sup>2</sup>C3
- D. JI<sup>2</sup>C4

## SAS Enable/Disable

Jumper JPS1 allows you to enable or disable the onboard SAS connections. The default setting is Pins 1-2 to enable the connection. See the table on the right for jumper settings.

SAS Enable Jumper Settings	
Jumper Setting	Definition
1-2	SAS Enabled (Default)
2-3	SAS Disabled

## SAS RAID Select

Jumper JPS2 allows you to select RAID Configuration settings for the onboard SAS connections. The default setting is the SR mode. To use the IT mode, you will need to flash your firmware first. To obtain the correct firmware, please contact tech\_support at Supermicro. For jumper settings, please refer to the table on the right.

SAS RAID Config. Select Jumper Settings	
Jumper Setting	Definition
Open	Integrated Target Mode (IT)
Closed (Default)	Software RAID (SR)

- A. SAS Enable
- B. SAS RAID Config. Select

## CNF1/CNF2 Enable

Jumper JPI1 allows you to enable or disable CNF1/CNF2 (IEEE1394a) connection support. The default setting is Pins 1-2 to enable the connection. See the table on the right for jumper settings.

CNF1/2 Enable Jumper Settings	
Jumper Setting	Definition
1-2	Normal (Default)
2-3	1394a support Disabled

## A. CNF1/2 Enable

## 2-8 Onboard Indicators

### GLAN LEDs

There are two GLAN ports on the motherboard. Each Gigabit Ethernet LAN port has two LEDs. The green LED indicates activity, while the Link LED may be green, amber or off to indicate the speed of the connection. See the tables at right for more information.

**Rear View** (when facing the rear side of the chassis)

GLAN Activity Indicator LED Settings		
Color	Status	Definition
Green	Flashing	Active

GLAN Link Indicator LED Settings	
LED Color	Definition
Off	No Connection or 10 Mbps
Green	100 Mbps
Amber	1 Gbps

### Onboard Power LED

An Onboard Power LED is located at LE1 on the motherboard. When this LED is on, the system is on. Be sure to turn off the system and unplug the power cord before removing or installing components. See the tables at right for more information.

Onboard PWR LED Indicator (LE1) LED Settings	
LED Color	Definition
Off	System Off (PWR cable not connected)
Green	System On
Green: Flashing Quickly	ACPI S1 State
Green: Flashing Slowly	ACPI S3 (STR) State

A. GLAN Port LEDs

B. Onboard Power LED

## SAS LED Indicators

Two Onboard SAS LED are located at LES1/LES2 on the motherboard. When this LES1 is on, SAS Connections are active. When this LES2 is on, SAS connections work properly. See the tables at right for more information.

Onboard SAS LED Indicators (LES1/LES2) Settings			
LED#		Color	Definition
LES1	Activity LED	Green	SAS: Active
LES2	Heartbeat LED	Yellow	SAS: Normal

A. SAS Activity LED

B. SAS Heartbeat LED

## 2-9 Floppy Drive, SIMLP, Serial ATA and Hard Disk Drive Connections

Note the following when connecting the floppy and hard disk drive cables:

- The floppy disk drive cable has seven twisted wires.
- A red mark on a wire typically designates the location of pin 1.
- A single floppy disk drive ribbon cable has 34 wires and two connectors to provide for two floppy disk drives. The connector with twisted wires always connects to drive A, and the connector that does not have twisted wires always connects to drive B.

### Floppy Connector

The floppy connector is located close to the Front Panel Control on the motherboard. See the table on the right for pin definitions.

**Floppy Drive Connector  
Pin Definitions**

Pin#	Definition	Pin #	Definition
1	Ground	2	FDHDIN
3	Ground	4	Reserved
5	Key	6	FDEDIN
7	Ground	8	Index
9	Ground	10	Motor Enable
11	Ground	12	Drive Select B
13	Ground	14	Drive Select B
15	Ground	16	Motor Enable
17	Ground	18	DIR
19	Ground	20	STEP
21	Ground	22	Write Data
23	Ground	24	Write Gate
25	Ground	26	Track 00
27	Ground	28	Write Protect
29	Ground	30	Read Data
31	Ground	32	Side 1 Select
33	Ground	34	Diskette

A. Floppy

## Serial ATA (SATA) Ports

Six Serial ATA Ports (I-SATA0~I-SATA 5) are located at JS1~JS6 on the motherboard. These ports provide serial-link signal transmission, which is faster than that of the traditional Parallel ATA. See the table on the right for pin definitions.

Serial ATA Pin Definitions	
Pin#	Definition
1	Ground
2	TX_P
3	TX_N
4	Ground
5	RX_N
6	RX_P
7	Ground

## Serial-Attached SCSI (SAS) Ports (For X8DA3 only)

In addition to SATA connections, an LSI 1068E SAS Controller and eight SAS connectors are located on the X8DA3. To configure LSI SAS RAID settings, please refer to the LSI SAS RAID User Guide posted on our Web site @<http://www.supermicro.com/support/manuals/>.

See the layout below for the locations of SATA and SAS Connections.

A. I-SATA0

B. I-SATA1

C. I-SATA2

D. I-SATA3

E. I-SATA4

F. I-SATA5

G. SAS 0~3

H. SAS 4~7

## SIMLC IPMI Slot

The SIMLC IPMI (Supermicro Intelligent Management) slot is located at Slot 0 on the motherboard. This slot supports the SMC SIMLC (IPMI) Add-On card. To use IPMI 2.0, install Supermicro's SIMLC Add-On card on this slot and download the IPMIView Utility to your system. For IPMI configuration instructions and SIMLC Add-On Card information, please refer to the SIMLC User Guide posted on our Web site @<http://www.supermicro.com/products/accessories/addon/SIM.cfm>.

## A. SIMLC

## Chapter 3

# Troubleshooting

### 3-1 Troubleshooting Procedures

Use the following procedures to troubleshoot your system. If you have followed all of the procedures below and still need assistance, refer to the 'Technical Support Procedures' and/or 'Returning Merchandise for Service' section(s) in this chapter. Note: Always disconnect the power cord before adding, changing or installing any hardware components.

#### Before Power On

1. Make sure that there are no short circuits between the motherboard and chassis.
2. Disconnect all ribbon/wire cables from the motherboard, including those for the keyboard and mouse.
3. Remove all add-on cards.
4. Install CPU 1 first (making sure it is fully seated) and connect the chassis speaker and the power LED to the motherboard. (Check all jumper settings as well.)

#### No Power

1. Make sure that no short circuits between the motherboard and the chassis.
2. Make sure that all jumpers are set to their default positions.
3. Check that the 115V/230V switch on the power supply is properly set.
4. Turn the power switch on and off to test the system.
5. The battery on your motherboard may be old. Check to verify that it still supplies ~3VDC. If it does not, replace it with a new one.

## **No Video**

1. If the power is on but you have no video, remove all the add-on cards and cables.
2. Use the speaker to determine if any beep codes exist. Refer to the Appendix for details on beep codes.

## **Losing the System's Setup Configuration**

1. Make sure that you are using a high quality power supply. A poor quality power supply may cause the system to lose the CMOS setup information. Refer to Section 1-5 for details on recommended power supplies.
2. The battery on your motherboard may be old. Check to verify that it still supplies ~3VDC. If it does not, replace it with a new one.
3. If the above steps do not fix the Setup Configuration problem, contact your vendor for repairs.

## **Memory Errors**

When a No\_Memory\_Beep\_Code is issued by the system, check the following:

1. Make sure that the DIMM modules are properly and fully installed.
2. Check if different speeds of DIMMs have been installed. It is strongly recommended to use the same RAM speed for all DIMMs in the system.
3. Make sure you are using the correct type of DDR3 Registered ECC or Unbuf. ECC/Non-ECC 1333 MHz/1066 MHz/800 MHz SDRAM (recommended by the manufacturer.)
4. Check for bad DIMM modules or slots by swapping a single module between all memory slots and check the results.
5. Make sure that all memory modules are fully seated in their slots. Make sure to follow the instructions given in Section 2-4 in Chapter 2.
6. Check the position of the 115V/230V switch on the power supply.
7. Please follow the instructions given in the DIMM Population Tables listed on Page 2-7 to install your memory modules.

## 3-2 Technical Support Procedures

Before contacting Technical Support, please take the following steps. Also, please note that as a motherboard manufacturer, Supermicro does not sell directly to end-users, so it is best to first check with your distributor or reseller for troubleshooting services. They should know of any possible problem(s) with the specific system configuration that was sold to you.

1. Please go through the 'Troubleshooting Procedures' and 'Frequently Asked Question' (FAQ) sections in this chapter or see the FAQs on our Web site (<http://www.supermicro.com/support/faqs/>) before contacting Technical Support.
2. BIOS upgrades can be downloaded from our web site at (<http://www.supermicro.com/support/bios/>).
3. If you still cannot resolve the problem, include the following information when contacting Supermicro for technical support:
  - Motherboard model and PCB revision number
  - BIOS release date/version (this can be seen on the initial display when your system first boots up)
  - System configuration
  - An example of a Technical Support form is on our web site at (<http://www.supermicro.com/support/contact.cfm>).
  - Distributors: For immediate assistance, please have your account number ready when placing a call to our technical support department. We can be reached by e-mail at [support@supermicro.com](mailto:support@supermicro.com) or by fax at: (408) 503-8000, option 2.

## 3-3 Frequently Asked Questions

**Question:** What are the various types of memory that my motherboard can support?

**Answer:** The X8DA3/X8DAi has 12 240-pin DIMM slots that support DDR3 Registered ECC Registered ECC or Unbuf. ECC/Non-ECC 1333 MHz/1066 MHz/800 MHz SDRAM modules. It is strongly recommended that you do not mix memory modules of different speeds and sizes. Please follow all memory installation instructions given on Section 2-4 in Chapter 2.

**Question: How do I update my BIOS?**

**Answer:** It is recommended that you **do not** upgrade your BIOS if you are not experiencing any problems with your system. Updated BIOS files are located on our web site at <http://www.supermicro.com/support/bios/>. Please check our BIOS warning message and the information on how to update your BIOS on our web site. Select your motherboard model and download the BIOS file to your computer. Also, check the current BIOS revision and make sure that it is newer than your BIOS before downloading. You can choose from the zip file and the .exe file. If you choose the zip BIOS file, please unzip the BIOS file onto a bootable USB device. Run the batch file using the format flash.bat filename.rom from your bootable USB device to flash the BIOS. Then, your system will automatically reboot. Please note that this process may take a few minutes to complete. Do not be concerned if the screen is paused for a few minutes.

**Warning:** Do not shut down or reset the system while updating the BIOS to prevent possible system boot failure!

**Note:** The SPI BIOS chip used on this motherboard cannot be removed. Send your motherboard back to Supermicro for repair.

**Question: What's on the CD that came with my motherboard?**

**Answer:** The supplied compact disc has quite a few drivers and programs that will greatly enhance your system. We recommend that you review the CD and install the applications you need. Applications on the CD include chipset drivers for the Windows OS, security and audio drivers.

## 3-4 Returning Merchandise for Service

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. You can also request a RMA authorization online (<http://www.supermicro.com/support/rma/>). When returning the motherboard to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete.

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alternation, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.

## Chapter 4

### BIOS

#### 4-1 Introduction

This chapter describes the AMI BIOS Setup Utility for the X8DA3/X8DAi. The AMI ROM BIOS is stored in a Flash EEPROM and can be easily updated. This chapter describes the basic navigation of the AMI BIOS Setup Utility setup screens.

#### Starting BIOS Setup Utility

To enter the AMI BIOS Setup Utility screens, press the <Delete> key while the system is booting up.

 **Note:** In most cases, the <Delete> key is used to invoke the AMI BIOS setup screen. There are a few cases when other keys are used, such as <F1>, <F2>, etc.

Each main BIOS menu option is described in this manual. The Main BIOS setup menu screen has two main frames. The left frame displays all the options that can be configured. Grayed-out options cannot be configured. Options in blue can be configured by the user. The right frame displays the key legend. Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often a text message will accompany it. (**Note:** the AMI BIOS has default text messages built in. Supermicro retains the option to include, omit, or change any of these text messages.)

The AMI BIOS Setup Utility uses a key-based navigation system called "hot keys". Most of the AMI BIOS setup utility "hot keys" can be used at any time during the setup navigation process. These keys include <F1>, <F10>, <Enter>, <ESC>, arrow keys, etc.

 **Note:** Options printed in **Bold** are default settings.

#### How To Change the Configuration Data

The configuration data that determines the system parameters may be changed by entering the AMI BIOS Setup utility. This Setup utility can be accessed by pressing <Del> at the appropriate time during system boot.

## Starting the Setup Utility

Normally, the only visible Power-On Self-Test (POST) routine is the memory test. As the memory is being tested, press the <Delete> key to enter the main menu of the AMI BIOS Setup Utility. From the main menu, you can access the other setup screens. An AMI BIOS identification string is displayed at the left bottom corner of the screen below the copyright message.

**Warning!** Do not upgrade the BIOS unless your system has a BIOS-related issue. Flashing the wrong BIOS can cause irreparable damage to the system. In no event shall Supermicro be liable for direct, indirect, special, incidental, or consequential damages arising from a BIOS update. If you have to update the BIOS, do not shut down or reset the system while the BIOS is updating. This is to avoid possible boot failure.

## 4-2 Main Setup

When you first enter the AMI BIOS Setup Utility, you will enter the Main setup screen. You can always return to the Main setup screen by selecting the Main tab on the top of the screen. The Main BIOS Setup screen is shown below.

**System Overview:** The following BIOS information will be displayed:

### System Time/System Date

Use this option to change the system time and date. Highlight *System Time* or *System Date* using the arrow keys. Key in new values through the keyboard and press <Enter>. Press the <Tab> key to move between fields. The date must be entered in Day MM/DD/YY format. The time is entered in HH:MM:SS format. (**Note:** The time is in the 24-hour format. For example, 5:30 P.M. appears as 17:30:00.)

**Supermicro X8DA3/X8DAi**

- BIOS Build Version: This item displays the BIOS revision used in your system.
- BIOS Build Date: This item displays the date when this BIOS was completed.
- AMI BIOS Core Version: This item displays the revision number of the AMI BIOS Core upon which your BIOS was built.

**Processor**

The AMI BIOS will automatically display the status of the processor used in your system:

- CPU Type: This item displays the type of CPU used in the motherboard.
- Speed: This item displays the speed of the CPU detected by the BIOS.
- Physical Count: This item displays the number of processors installed in your system as detected by the BIOS.
- Logical Count: This item displays the number of CPU Cores installed in your system as detected by the BIOS.
- Micro\_code Revision: This item displays the revision number of the BIOS Micro\_code used in your system.

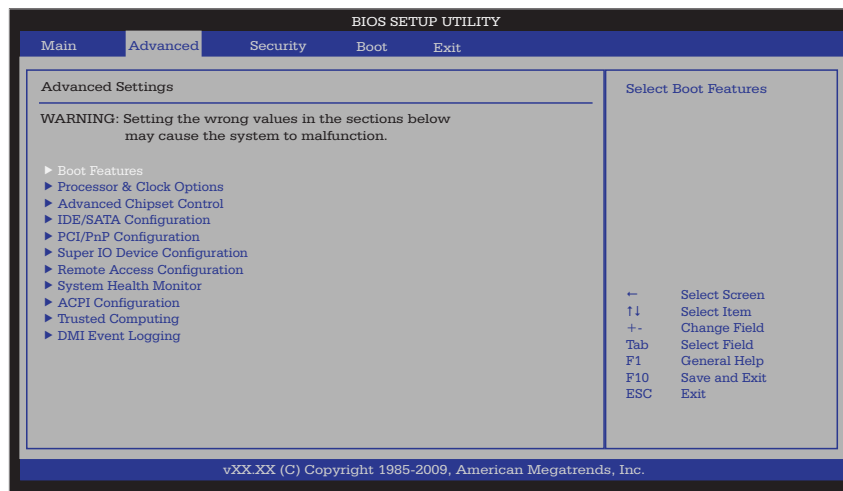

**System Memory**

This displays the size of memory available in the system:

- Size: This item displays the memory size detected by the BIOS.

## 4-3 Advanced Setup Configurations

Use the arrow keys to select Boot Setup and hit <Enter> to access the submenu items:

### ► Boot Features

#### Quick Boot

If Enabled, this option will skip certain tests during POST to reduce the time needed for system boot. The options are **Enabled** and Disabled.

#### Quiet Boot

This option allows the bootup screen options to be modified between POST messages or the OEM logo. Select Disabled to display the POST messages. Select Enabled to display the OEM logo instead of the normal POST messages. The options are **Enabled** and Disabled.

#### AddOn ROM Display Mode

This sets the display mode for the Option ROM. Select Keep Current to use the current AddOn ROM Display setting. Select Force BIOS to use the Option ROM display mode set by the system BIOS. The options are **Force BIOS** and Keep Current.

#### Bootup Num-Lock

This feature selects the Power-on state for Numlock key. The options are Off and **On**.

#### Wait For 'F1' If Error

This forces the system to wait until the 'F1' key is pressed if an error occurs. The options are Disabled and **Enabled**.

#### Hit 'Del' Message Display

This feature displays "Press DEL to run Setup" during POST. The options are **Enabled** and Disabled.

### Interrupt 19 Capture

Interrupt 19 is the software interrupt that handles the boot disk function. When this item is set to Enabled, the ROM BIOS of the host adaptors will "capture" Interrupt 19 at boot and allow the drives that are attached to these host adaptors to function as bootable disks. If this item is set to Disabled, the ROM BIOS of the host adaptors will not capture Interrupt 19, and the drives attached to these adaptors will not function as bootable devices. The options are **Enabled** and Disabled.

## Power Configuration

### Power Button Function

If set to Instant\_Off, the system will power off immediately as soon as the user hits the power button. If set to 4\_Second\_Override, the system will power off when the user presses the power button for 4 seconds or longer. The options are **Instant\_Off** and 4\_Second\_Override.

### Restore on AC Power Loss

Use this feature to set the power state after a power outage.

- Select Power-Off for the system power to remain off after a power loss.
- Select Power-On for the system power to be turned on after a power loss.
- Select Last State to allow the system to resume its last state before a power loss.

The options are Power-On, Power-Off and **Last State**.

### Watch Dog Function

If enabled, the Watch Dog Timer will allow the system to reboot when it is inactive for more than 5 minutes. The options are Enabled and **Disabled**.

## ►Processor and Clock Options

This submenu allows the user to configure the Processor and Clock settings.

### Ratio CMOS Setting

This feature allows the user to set the ratio between CPU Core Clocks and the FSB Frequency. Select Auto to allow the BIOS to automatically configure the CPU Ratio. The default setting is **18**.

### **C1E Support**

Select Enabled to use the feature of Enhanced Halt State. C1E significantly reduces the CPU's power consumption by reducing the CPU's clock cycle and voltage during a "Halt State." The options are Disabled and **Enabled**.

### **Hardware Prefetcher (Available when supported by the CPU)**

If set to Enabled, the hardware pre fetcher will pre fetch streams of data and instructions from the main memory to the L2 cache in the forward or backward manner to improve CPU performance. The options are Disabled and **Enabled**.

### **Adjacent Cache Line Prefetch (Available when supported by the CPU)**

The CPU fetches the cache line for 64 bytes if this option is set to Disabled. The CPU fetches both cache lines for 128 bytes as comprised if **Enabled**.

### **MPS and ACPI MADT Ordering**

This feature allows the user to configure the MPS (Multi-Processor Specification) and ACPI settings for your motherboard. Select **Modern Ordering** if the XP or a newer version of Windows OS is used in the motherboard. Select Legacy Ordering if the 2000 or an earlier version of Windows OS is used. The options are **Modern Ordering** and Legacy Ordering.

### **Max CPUID Value Limit**

This feature allows the user to set the maximum CPU ID value. Enable this function to boot the legacy operating systems that cannot support processors with extended CPUID functions. The options are Enabled and **Disabled** (for the Windows OS.).

### **Intel® Virtualization Technology (Available when supported by the CPU)**

Select Enabled to use the feature of Virtualization Technology to allow one platform to run multiple operating systems and applications in independent partitions, creating multiple "virtual" systems in one physical computer. The options are **Enabled** and Disabled. **Note:** If there is any change to this setting, you will need to power off and restart the system for the change to take effect. Please refer to Intel's web site for detailed information.

### **Execute-Disable Bit Capability (Available when supported by the OS and the CPU)**

Set to Enabled to enable the Execute Disable Bit which will allow the processor to designate areas in the system memory where an application code can execute and where it cannot, thus preventing a worm or a virus from flooding illegal codes to overwhelm the processor or damage the system during an attack. The default is **Enabled**. (Refer to Intel and Microsoft Web Sites for more information.)

**Simultaneous Multi-Threading (Available when supported by the CPU)**

Set to Enabled to use the Simultaneous Multi-Threading Technology, which will result in increased CPU performance. The options are Disabled and **Enabled**.

**Active Processor Cores**

Set to Enabled to use a processor's Second Core and beyond. (Please refer to Intel's web site for more information.) The options are **All**, 1 and 2.

**Intel® Speed\_Step™ Technology**

EIST (Enhanced Intel SpeedStep Technology) allows the system to automatically adjust processor voltage and core frequency in an effort to reduce power consumption and heat dissipation. **Please refer to Intel's web site for detailed information.** The options are Disable (Disable GV3) and **Enable (Enable GV3)**.

**Intel® TurboMode Technology**

Select Enabled to use the Turbo Mode to boost system performance. The options are **Enabled** and Disabled.

**Intel® C-STATE Tech**

If enabled, C-State is set by the system automatically to either C2, C3 or C4 state. The options are **Enabled** and Disabled.

**C-State package limit setting**

If set to Auto, the AMI BIOS will automatically set the limit on the C-State package register. The options are **Auto**, C1, C3, C6 and C7.

**C1 Auto Demotion**

When enabled, the CPU will conditionally demote C3, C6 or C7 requests to C1 based on un-core auto-demote information. The options are Disabled and **Enabled**.

**C3 Auto Demotion**

When enabled, the CPU will conditionally demote C6 or C7 requests to C3 based on un-core auto-demote information. The options are Disabled and **Enabled**.

**Clock Spread Spectrum**

Select Enable to use the feature of Clock Spectrum, which will allow the BIOS to monitor and attempt to reduce the level of Electromagnetic Interference caused by the components whenever needed. The options are **Disabled** and Enabled.

**►Advanced Chipset Control**

The items included in the Advanced Settings submenu are listed below:

## ► CPU Bridge Configuration

### QPI Links Speed

This feature selects QPI's data transfer speed. The options are Slow-mode, and **Full Speed**.

### QPI Frequency

This selects the desired QPI frequency. The options are **Auto**, 4.800 GT, 5.866GT, 6.400 GT.

### QPI L0s and L1

This enables the QPI power state to low power. L0s and L1 are automatically selected by the motherboard. The options are Disabled and **Enabled**.

### Memory Frequency

This feature forces a DDR3 frequency slower than what the system has detected. The available options are **Auto**, Force DDR-800, Force DDR-1066, Force DDR-1333.

### Memory Mode

The options are **Independent**, Channel Mirror, Lockstep and Sparing.

Independent - All DIMMs are available to the operating system.

Channel Mirror - The motherboard maintains two identical copies of all data in memory for redundancy.

Lockstep - The motherboard uses two areas of memory to run the same set of operations in parallel.

Sparing - A preset threshold of correctable errors is used to trigger fail-over. The spare memory is put online and used as active memory in place of the failed memory.

### Demand Scrubbing

A memory error-correction scheme where the Processor writes corrected data back into the memory block from where it was read by the Processor. The options are **Enabled** and Disabled.

### Patrol Scrubbing

A memory error-correction scheme that works in the background looking for and correcting resident errors. The options are **Enabled** and Disabled.

### Throttling - Closed Loop/Throttling - Open Loop

Throttling improves reliability and reduces power in the processor by automatic voltage control during processor idle states. Available options are **Disabled** and **Enabled**. If Enabled, the following items will appear:

**Hysteresis Temperature (Closed Loop Only)**

Temperature Hysteresis is the temperature lag (in degrees Celsius) after the set DIMM temperature threshold is reached before Closed Loop Throttling begins. The options are Disabled, **1.5°C**, 3.0°C, and 6.0°C.

**Guardband Temperature (Closed Loop Only)**

This is the temperature which applies to the DIMM temperature threshold. Each step is in 0.5°C increment. The default is **[006]**. Press "+" or "-" on your keyboard to change this value.

**Inlet Temperature**

This is the temperature detected at the chassis inlet. Each step is in 0.5°C increment. The default is **[070]**.

**Temperature Rise**

This is the temperature rise to the DIMM thermal zone. Each step is in 0.5°C increment. The default is **[020]**.

**Air Flow**

This is the air flow speed to the DIMM modules. Each step is one mm/sec. The default is **[1500]**.

**Altitude**

This feature defines how many meters above or below sea level the system is located. The options are **Sea Level or Below**, 1~300, 301~600, 601~900, 901~1200, 1201~1500, 1501~1800, 1801~2100, 2101~2400, 2401~2700, 2701~3000.

**DIMM Pitch**

This is the physical space between each DIMM module. Each step is in 1/1000 of an inch. The default is **[400]**.

**►North Bridge Configuration**

This feature allows the user to configure Intel IOH settings.

**Crystal Beach/DMA (Direct Memory Access)**

This feature works in conjunction with the Intel I/O AT (Acceleration Technology) to accelerate the performance of TOE devices. (**Note:** A TOE device is a specialized, dedicated processor that is installed on an add-on card or a network card to handle some or all packet processing of this add-on card.) When this feature is set to Enabled, it will enhance overall system performance by providing direct memory access for data transferring. The options are Enabled and **Disabled**.

---

### **Crystal Beach/DCA (Direct Cache Access-available when Crystal Beach/DMA is enabled.)**

This feature works in conjunction with the Intel I/O AT (Acceleration Technology) to accelerate the performance of the TOE device. When this feature set to Enabled, it will enhance overall system performance by providing direct cache access for data transferring. The options are Enabled and **Disabled**.

### **NUMA Support**

Select Enabled to use the feature of Non-Uniform Memory Access to improve CPU performance. The options are **Enabled** and Disabled.

### **Payload Size**

Some add-on cards perform faster when the payload size is limited to 128 Bytes; while others, with a payload size of 256 Bytes. Please refer to your add-on card user guide for the desired setting. The options are 256 Bytes and **128 Bytes**.

### **Intel VT-d**

Select Enabled to enable Intel's Virtualization Technology support for Direct I/O VT-d by reporting the I/O device assignments to VMM through the DMAR ACPI Tables. This feature offers fully-protected I/O resource-sharing across the Intel platforms, providing the user with greater reliability, security and availability in networking and data-sharing. The settings are Enabled and **Disabled**.

## **►SouthBridge Configuration**

This feature allows the user to configure Intel ICH South Bridge settings.

### **USB Functions**

This feature allows the user to enable or disable onboard USB support. The Options are: Disabled, and **Enabled**.

### **Legacy USB Support**

Select Enabled to use Legacy USB devices. If this item is set to Auto, Legacy USB support will be automatically enabled if a legacy USB device is installed on the motherboard, and vice versa. The settings are Disabled, and **Enabled**.

### **USB 2.0 Controller Mode**

This setting allows you to select the USB 2.0 Controller mode. The options are **Hi-Speed (480 Mbps)** and Full Speed (12 Mbps).

### **BIOS EHCI Hand-Off**

Select Enabled to enable BIOS Enhanced Host Controller Interface support to provide a workaround solution for an operating system that does not have EHCI

Hand-Off support. When enabled, the EHCI Interface will be changed from the BIOS-controlled to the OS-controlled. The options are Disabled and **Enabled**.

### **HDA Controller**

Select Enabled to activate the onboard High-Definition Audio controller. The options are **Enabled** and Disabled.

### **Front\_Side Audio Mode**

Use this feature to select Front Side Audio Mode. Select HD Audio to enable HD (High-Definition) Audio support. Select AC' 97 to use AC' 97 Audio. The options are **HD Audio** and AC' 97 Audio.

## **►IDE/SATA Configuration**

When this submenu is selected, the AMI BIOS automatically detects the presence of the IDE devices and displays the following items:

### **SATA#1 Configuration**

If Compatible is selected, it sets SATA#1 to legacy compatibility mode, while selecting Enhanced sets SATA#1 to native SATA mode. The options are Disabled, Compatible and **Enhanced**.

#### **Configure SATA#1 as**

This feature allows the user to select the drive type for SATA#1. The options are **IDE**, RAID and AHCI.

### **SATA#2 Configuration**

Selecting Enhanced will set SATA#2 to native SATA mode. The options are Disabled, and **Enhanced**.

### **Primary IDE Master/Slave, Secondary IDE Master/Slave, Third IDE Master, and Fourth IDE Master**

These settings allow the user to set the parameters of the IDE drives specified. Hit <Enter> to activate the following submenu screen for detailed options of these items. Set the correct configurations accordingly.

#### **Type**

This feature allows the user to specify the type of device connected to the system. Select Auto to allow the BIOS to automatically select the IDE type for the drive as detected. Select ARMD for removable devices. The options are Not Installed, **Auto**, CD/DVD and ARMD.

### **LBA/Large Mode**

LBA (Logical Block Addressing) is a method of addressing data on a disk drive. In the LBA mode, the maximum drive capacity is 137 GB. For drive capacities over 137 GB, your system must be equipped with a 48-bit LBA mode addressing. If not, contact your manufacturer or install an ATA/133 IDE controller card that supports 48-bit LBA mode. The options are Disabled and **Auto**.

### **Block (Multi-Sector Transfer)**

Block Mode boosts the IDE drive performance by increasing the amount of data transferred. Only 512 bytes of data can be transferred per interrupt if Block Mode is not used. Block Mode allows transfers of up to 64 KB per interrupt. Select Disabled to allow data to be transferred from and to the device one sector at a time. Select Auto to allow data transfer from and to the device occur multiple sectors at a time if the device supports it. The options are **Auto** and Disabled.

### **PIO Mode**

The IDE PIO (Programmable I/O) Mode programs timing cycles between the IDE drive and the programmable IDE controller. As the PIO mode increases, the cycle time decreases. The options are **Auto**, 0, 1, 2, 3, and 4.

Select Auto to allow the AMI BIOS to automatically detect the PIO mode. Use this value if the IDE disk drive support cannot be determined.

Select 0 to allow the AMI BIOS to use PIO mode 0. It has a data transfer rate of 3.3 MBs.

Select 1 to allow the AMI BIOS to use PIO mode 1. It has a data transfer rate of 5.2 MBs.

Select 2 to allow the AMI BIOS to use PIO mode 2. It has a data transfer rate of 8.3 MBs.

Select 3 to allow the AMI BIOS to use PIO mode 3. It has a data transfer rate of 11.1 MBs.

Select 4 to allow the AMI BIOS to use PIO mode 4. It has a data transfer bandwidth of 32-Bits. Select Enabled to enable 32-Bit data transfer.

### **DMA Mode**

Select Auto to allow the BIOS to automatically detect IDE DMA mode when the IDE disk drive support cannot be determined.

Select SWDMA0 to allow the BIOS to use Single Word DMA mode 0. It has a data transfer rate of 2.1 MBs.

Select SWDMA1 to allow the BIOS to use Single Word DMA mode 1. It has a data transfer rate of 4.2 MBs.

Select SWDMA2 to allow the BIOS to use Single Word DMA mode 2. It has a data transfer rate of 8.3 MBs.

Select MWDMA0 to allow the BIOS to use Multi Word DMA mode 0. It has a data transfer rate of 4.2 MBs.

Select MWDMA1 to allow the BIOS to use Multi Word DMA mode 1. It has a data transfer rate of 13.3 MBs.

Select MWDMA2 to allow the BIOS to use Multi-Word DMA mode 2. It has a data transfer rate of 16.6 MBs.

Select UDMA0 to allow the BIOS to use Ultra DMA mode 0. It has a data transfer rate of 16.6 MBs. It has the same transfer rate as PIO mode 4 and Multi Word DMA mode 2.

Select UDMA1 to allow the BIOS to use Ultra DMA mode 1. It has a data transfer rate of 25 MBs.

Select UDMA2 to allow the BIOS to use Ultra DMA mode 2. It has a data transfer rate of 33.3 MBs.

Select UDMA3 to allow the BIOS to use Ultra DMA mode 3. It has a data transfer rate of 66.6 MBs.

Select UDMA4 to allow the BIOS to use Ultra DMA mode 4. It has a data transfer rate of 100 MBs.

Select UDMA5 to allow the BIOS to use Ultra DMA mode 5. It has a data transfer rate of 133 MBs.

Select UDMA6 to allow the BIOS to use Ultra DMA mode 6. It has a data transfer rate of 133 MBs. The options are **Auto**, SWDMAn, MWDMA<sub>n</sub>, and UDMA<sub>n</sub>.

### **S.M.A.R.T. For Hard disk drives**

Self-Monitoring Analysis and Reporting Technology (SMART) can help predict impending drive failures. Select Auto to allow the AMI BIOS to automatically detect hard disk drive support. Select Disabled to prevent the AMI BIOS from using the S.M.A.R.T. Select Enabled to allow the AMI BIOS to use the S.M.A.R.T. to support hard drive disk. The options are Disabled, Enabled, and **Auto**.

### **32Bit Data Transfer**

Select Enable to enable the function of 32-bit IDE data transfer. The options are **Enabled** and Disabled.

### **IDE Detect Timeout (sec)**

Use this feature to set the time-out value for the BIOS to detect the IDE devices installed in the system. The options are 0 (sec), 5, 10, 15, 20, 25, 30, and **35**.

## ►PCI/PnP Configuration

### Clear NVRAM

This feature clears the NVRAM during system boot. The options are **No** and Yes.

### Plug & Play OS

Selecting Yes allows the OS to configure Plug & Play devices. (This is not required for system boot if your system has an OS that supports Plug & Play.) Select **No** to allow the AMI BIOS to configure all devices in the system.

### PCI Latency Timer

This feature sets the latency Timer of each PCI device installed on a PCI bus. Select 64 to set the PCI latency to 64 PCI clock cycles. The options are 32, **64**, 96, 128, 160, 192, 224 and 248.

### PCI IDE Bus Master

When enabled, the BIOS uses PCI bus mastering for reading/writing to IDE drives. The options are Disabled and **Enabled**.

### Slot 1 Option ROM~Slot 6 Option ROM

Select Enabled to enable Slot 1 Option ROM~Slot 6 Option ROM, which will allow you to boot the computer from a PCI device installed on a PCI slot. The options are Disabled and **Enabled**.

### LAN1 PXE (i82573V)/LAN2 PXE (i82573L) PXE Option ROM

Select Enabled to enable the onboard LAN1/LAN2 PXE Option ROMs. This is to boot computers using a network interface. The options are Enabled and **Disabled**.

### LSI SAS 1068 Option ROM

Select Enabled to enable the LSI SAS 1068 Option ROM. This is to boot computers using a network interface. The options are **Enabled** and Disabled.

## ►Super IO Device Configuration

### Onboard Floppy Controller

Select Enable to enable the onboard Floppy Controller. The options are **Enabled** and Disabled.

### Floppy A/Floppy B

This feature allows the user to select the type of floppy drive connected to the system as specified. The options are Disabled, 360KB 5 1/4", 1.2MB 5 1/4", 720KB 3

1/2", 1.44MB 3 1/2" and 2.88MB 3 1/2". The default setting for Floppy A is **1.44MB 3 1/2"**, and for Floppy B is **Disabled**.

### **Serial Port1 Address/ Serial Port2 Address**

This option specifies the base I/O port address and the Interrupt Request address of Serial Port 1 and Serial Port 2. Select Disabled to prevent the serial port from accessing any system resources. When this option is set to Disabled, the serial port physically becomes unavailable. Select 3F8/IRQ4 to allow the serial port to use 3F8 as its I/O port address and IRQ 4 for the interrupt address. The options for Serial Port1 are Disabled, **3F8/IRQ4**, 3E8/IRQ4, 2E8/IRQ3. The options for Serial Port2 are Disabled, **2F8/IRQ3**, 3E8/IRQ4, and 2E8/IRQ3.

### **Serial Port 2 Mode**

Use this feature to configure Serial Port 2 mode. The options are **Normal**, IrDA and ASK IR. IrDA (Infrared Data) is an industry standard for remote control devices. ASK IR (Amplitude Shifted Keying Infrared) is a protocol compatible with Sharp® branded PDAs and other infrared devices.

## **► Remote Access Configuration**

### **Remote Access**

This allows the user to enable the Remote Access feature. The options are **Disabled** and Enabled.

If Remote Access is set to Enabled, the following items will display:

### **Serial Port Number**

This feature allows the user decide which serial port to be used for Console Redirection. The options are **COM 1** and COM 2.

### **Serial Port Mode**

This feature allows the user to set the serial port mode for Console Redirection. The options are **115200 8, n 1**; 57600 8, n, 1; 38400 8, n, 1; 19200 8, n, 1; and 9600 8, n, 1.

### **Flow Control**

This feature allows the user to set the flow control for Console Redirection. The options are **None**, Hardware, and Software.

### **Redirection After BIOS POST**

Select Disabled to turn off Console Redirection after Power-On Self-Test (POST). Select Always to keep Console Redirection active all the time after POST. (**Note:** This setting may not be supported by some operating systems.)

Select Boot Loader to keep Console Redirection active during POST and Boot Loader. The options are Disabled, Boot Loader, and **Always**.

### Terminal Type

This feature allows the user to select the target terminal type for Console Redirection. The options are **ANSI**, VT100, and VT-UTF8.

### VT-UTF8 Combo Key Support

A terminal keyboard definition that provides a way to send commands from a remote console. Available options are **Enabled** and Disabled.

### Sredir Memory Display Delay

This feature defines the length of time in seconds to display memory information. The options are **No Delay**, Delay 1 Sec, Delay 2 Sec, and Delay 4 Sec.

## ►System Health Monitor

This feature allows the user to monitor system health and review the status of each item as displayed.

### CPU Overheat Alarm

This option allows the user to select the CPU Overheat Alarm setting which determines when the CPU OH alarm will be activated to provide warning of possible CPU overheat.

#### Warning!

1. Any temperature that exceeds the CPU threshold temperature predefined by the CPU manufacturer may result in CPU overheat or system instability. When the CPU temperature reaches this predefined threshold, the CPU and system cooling fans will run at full speed.
2. To avoid possible system overheating, please be sure to provide adequate airflow to your system.

The options are:

- The Early Alarm: Select this setting if you want the CPU overheat alarm (including the LED and the buzzer) to be triggered as soon as the CPU temperature reaches the CPU overheat threshold as predefined by the CPU manufacturer.
- **The Default Alarm:** Select this setting if you want the CPU overheat alarm (including the LED and the buzzer) to be triggered when the CPU temperature reaches about 5°C above the threshold temperature as predefined by the CPU manufacturer to give the CPU and system fans additional time needed for CPU

and system cooling. In both the alarms above, please take immediate action as shown below.

### **CPU Temperature/System Temperature**

This feature displays current temperature readings for the CPU and the System.

The following items will be displayed for your reference only:

### **CPU 1 Temperature/CPU 2 Temperature**

The CPU thermal technology that reports absolute temperatures (Celsius/Fahrenheit) has been upgraded to a more advanced feature by Intel in its newer processors. The basic concept is each CPU is embedded by unique temperature information that the motherboard can read. This 'Temperature Threshold' or 'Temperature Tolerance' has been assigned at the factory and is the baseline on which the motherboard takes action during different CPU temperature conditions (i.e., by increasing CPU Fan speed, triggering the Overheat Alarm, etc). Since CPUs can have different 'Temperature Tolerances', the installed CPU can now send information to the motherboard what its 'Temperature Tolerance' is, and not the other way around. This results in better CPU thermal management.

Supermicro has leveraged this feature by assigning a temperature status to certain thermal conditions in the processor (Low, Medium and High). This makes it easier for the user to understand the CPU's temperature status, rather than by just simply seeing a temperature reading (i.e., 25°C). The CPU Temperature feature will display the CPU temperature status as detected by the BIOS:

**Low** – This level is considered as the 'normal' operating state. The CPU temperature is well below the CPU 'Temperature Tolerance'. The motherboard fans and CPU will run normally as configured in the BIOS (Fan Speed Control).

User intervention: No action required.

**Medium** – The processor is running warmer. This is a 'precautionary' level and generally means that there may be factors contributing to this condition, but the CPU is still within its normal operating state and below the CPU 'Temperature Tolerance'. The motherboard fans and CPU will run normally as configured in the BIOS. The fans may adjust to a faster speed depending on the Fan Speed Control settings.

User intervention: No action is required. However, consider checking the CPU fans and the chassis ventilation for blockage.

**High** – The processor is running hot. This is a 'caution' level since the CPU's 'Temperature Tolerance' has been reached (or has been exceeded) and may activate an overheat alarm.

User intervention: If the system buzzer and Overheat LED has activated, take action immediately by checking the system fans, chassis ventilation and room temperature to correct any problems.

**Notes:** 1. The system may shut down if it continues for a long period to prevent damage to the CPU.

2. The information provided above is for your reference only. For more information on thermal management, please refer to Intel's Web site at [www.Intel.com](http://www.Intel.com).

**System Temperature:** The system temperature will be displayed (in degrees in Celsius and Fahrenheit) as it is detected by the BIOS.

### Voltage Monitoring

Vcore, 3.3Vcc, 12V, V\_DIMM, 5V, -12V, 3.3VSB, and VBAT

### System Fan Monitor

This feature allows the user to decide how the system controls the speeds of the onboard fans. The CPU temperature and the fan speed are correlative. When the CPU on-die temperature increases, the fan speed will also increase, and vice versa. Select Workstation if your system is used as a Workstation. Select Server if your system is used as a Server. Select "Disabled, (Full Speed @12V)" to disable the fan speed control function and allow the onboard fans to constantly run at the full speed (12V). The Options are: **Disabled (@full-speed)**, 4-pin (Server), 4-pin (Workstation), and 4-pin (Super Quiet).

### Fan1 ~ Fan 8 Reading

This feature displays the fan speed readings from fan interfaces Fan1 through Fan5.

## ►ACPI Configuration

Use this feature to configure Advanced Configuration and Power Interface (ACPI) power management settings for your system.

### ACPI Version Features

The options are ACPI v1.0, **ACPI v2.0** and ACPI v3.0. Please refer to ACPI's website for further explanation: <http://www.acpi.info/>.

### ACPI Suspend Mode

This option is used to select the ACPI State that is used for system suspend. The options are S1 (POS), S3 (STR) and **Auto**.

S1 (POS) - All processor caches are erased, and stops executing instructions. Power to the CPU(s) and RAM is maintained, but RAM is refreshed.

S3 (STR) - The CPU has no power and the power supply goes on reduced power mode. However, main memory (RAM) is still powered.

#### **ACPI APIC Support**

Select Enabled to include the ACPI APIC Table Pointer in the RSDT (Root System Description Table) pointer list. The options are **Enabled** and Disabled.

#### **APIC ACPI SCI IRQ**

When this item is set to Enabled, APIC ACPI SCI IRQ is supported by the system. The options are Enabled and **Disabled**.

#### **Headless Mode**

This feature is used to enable system to function without a keyboard, monitor or mouse attached. The options are Enabled and **Disabled**.

#### **USB Device Wakeup from S3/S4**

Select to Enabled to allow USB devices to wakeup from S3/S4 state. The options are Enabled and **Disabled**.

#### **High Performance Event Timer**

Select Enabled to activate the High Performance Event Timer (HPET) that produces periodic interrupts at a much higher frequency than a Real-time Clock (RTC) does in synchronizing multimedia streams, providing smooth playback and reducing the dependency on other timestamp calculation devices, such as an x86 RDTSC Instruction embedded in the CPU. The High Performance Event Timer is used to replace the 8254 Programmable Interval Timer. The options are Enabled and **Disabled**.

### **►Trusted Computing (Optional for OEM only)**

#### **TCG/TPM (Trusted Platform Module) Support**

Select Yes on this item and enable the TPM jumper on the motherboard to enable TCG (TPM 1.1/1.2)/TPM support in order to improve data integrity and network security. The options are **No** and Yes.

If this feature is set to Yes, the following items will display:

##### **TPM Enable/Disable Status**

This item displays the status of TPM Enabled/Disabled state.

##### **TPM Owner Status**

This item displays the status of TPM Ownership.

## ► IPMI Configuration (Available when an IPMI Card is installed on the board.)

Intelligent Platform Management Interface (IPMI) is used for system health monitoring and system management.

### Status of BMC

This feature displays the status of the BMC controller which manages the interface between system software and hardware.

### IPMI Firmware Revision

This feature displays the firmware revision of current IPMI platform.

## ► View BMC System Event Log

This feature displays the BMC System Event Log (SEL). To view an event, select an Entry Number and pressing <Enter>.

- SEL Entry Number
- SEL Record ID
- SEL Record Type
- Event Timestamp
- Generator ID
- Event Message Format User
- Event Sensor Type
- Event Sensor Number
- Event Dir Type
- Event Data

### Clear BMC System Event Log

#### Clear BMC System Log

Select OK and press the <Enter> key to clear the BMC system log. Select Cancel to keep the BMC System log. The options are **OK** and Cancel.

**Caution:** Make sure that you no longer need data stored in the log before clearing the BMC Event Log.

## ► Set LAN Configuration

Use this feature to configure the IPMI LAN adapter with a network address.

### Channel Number

Enter the channel number for the SET LAN Config command. This is initially set to **[1]**.

### Channel Number Status

This feature returns the channel status for the Channel Number selected above: "Channel Number is OK" or "Wrong Channel Number".

## ► IP Address Configuration

This submenu displays the following IP Address Configuration information.

### Parameter Selector

This item displays the parameter of your IP Address configuration.

### IP Address Source

This features allows the user to select how an IP address is assigned to a client computer or a network device. Select DHCP (Dynamic Host Configuration Protocol) to allow a client (computer or device) obtains an IP address from a DHCP server that manages a pool of IP addresses and network information on a "request and grant" basis. Upon time-out (or lease expiration), the IP address assigned to the client can be reassigned to a new client. Select **Static** (Static Allocation) to allow the host server to allocate an IP address based on a table containing MAC Address/ IP Address pairs that are manually entered (probably by a network administrator). Only clients with a MAC address listed in the MAC/IP Address Table will be assigned an IP address. The IP Address allocated to the client is on a longer term basis than that assigned by the DHCP mentioned in the other option. The options are DHCP and **Static**.

### IP Address

This item displays the IP address of this computer. IP addresses are 6 two-digit hexadecimal numbers (Base 16, 0 ~ 9, A, B, C, D, E, F) separated by dots. (i.e., 00.30.48.D0.D4.60).

### Current IP Address in BMC

This item displays the current IP address used for your IPMI connection.

## ► MAC Address Configuration

This submenu displays the following MAC Address Configuration information.

### **Parameter Selector**

Use this feature to select the parameter of your Mac Address configuration.

### **MAC Address**

This item displays the MAC address of this computer. MAC addresses are 6 two-digit hexadecimal numbers (Base 16, 0 ~ 9, A, B, C, D, E, F) separated by dots. (i.e., 00.30.48.D0.D4.60).

### **Current MAC Address in BMC**

This item displays the current MAC address used for your IPMI connection.

## **► Subnet Mask Configuration**

Subnet masks tell the network which subnet this machine belongs to. The value of each three-digit number separated by dots should not exceed 255.

### **Parameter Selector**

Use this feature to select the parameter of your Subnet Masks configuration.

### **Subnet Mask**

This item displays the current subnet mask setting for your IPMI connection.

### **Current Subnet Mask in BMC**

This item displays the current subnet mask setting for your IPMI connection.

## **► Gateway Address Configuration**

Enter the gateway address for this machine. This should be in decimal and in dotted quad form (i.e., 192.168.10.253). The value of each three-digit number separated by dots should not exceed 255 as shown in the screen below.

### **Parameter Selector**

Use this feature to select the parameter of your Gateway Address settings.

### **Gateway Address**

The BIOS will automatically enter the Gateway address of this machine; however it may be over-ridden. Gateway addresses are 6 two-digit hexadecimal numbers separated by dots.

### **Current Gateway Address in BMC**

This item displays the current Gateway address used for your IPMI connection.

## ► DMI Event Log

### View Event Log

Use this option to view the System Event Log.

### Mark all events as read

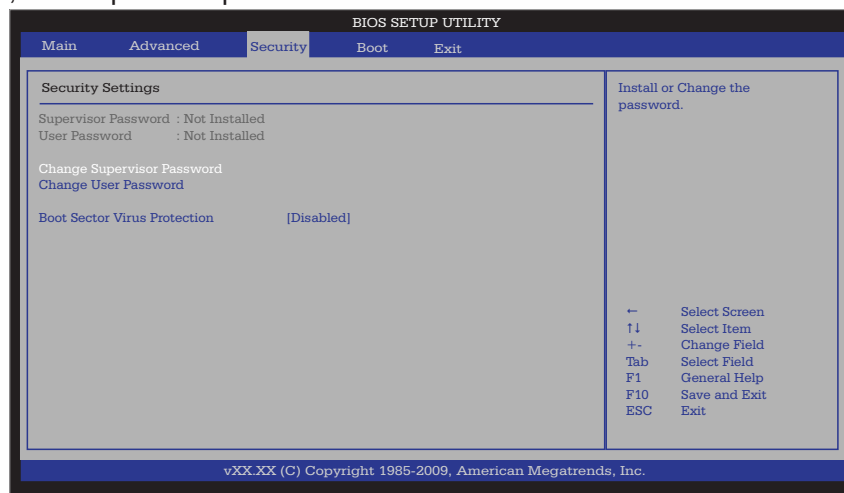

This option marks all events as read. The options are OK and Cancel.

### Clear event log

This option clears the Event Log memory of all messages. The options are OK and Cancel.

## 4-4 Security Settings

The AMI BIOS provides a Supervisor and a User password. If you use both passwords, the Supervisor password must be set first.

### Supervisor Password

This item indicates if a Supervisor password has been entered for the system. "Not Installed" means a Supervisor password has not been used.

### User Password

This item indicates if a user password has been entered for the system. "Not Installed" means that a user password has not been used.

### Change Supervisor Password

Select this feature and press <Enter> to access the submenu, and then enter a new Supervisor Password.

### User Access Level (Available when Supervisor Password is set as above)

Use this feature to set the user's access level. The options are:

- **Full Access:** grants full User read and write access to the Setup Utility,

- View Only: allows access to the Setup Utility, but cannot change the fields,
- Limited: allows only limited fields to be changed such as Date and Time,
- No Access: prevents User access to the Setup Utility.

### Change User Password

Select this feature and press <Enter> to access the submenu, and then enter a new User Password.

### Clear User Password (Available only if User Password has been set)

This item allows you to clear a user password after it has been entered.

### Password Check

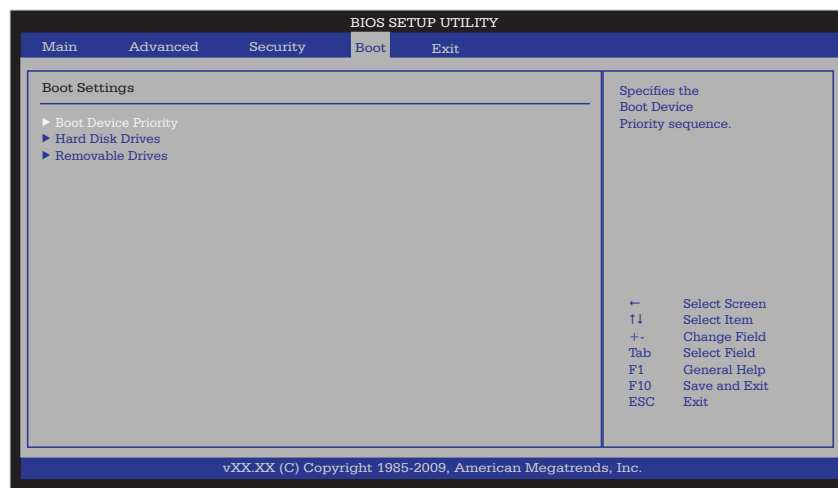

This item allows you to check a password after it has been entered. The options are **Setup** and Always.

### Boot Sector Virus Protection

When Enabled, the AMI BIOS displays a warning when any program (or virus) issues a Disk Format command or attempts to write to the boot sector of the hard disk drive. The options are Enabled and **Disabled**.

## 4-5 Boot Configuration

Use this feature to configure boot settings.

### ► Boot Device Priority

This feature allows the user to specify the sequence of priority for the Boot Device. The settings are 1st boot device, 2nd boot device, 3rd boot device, 4th boot device, 5th boot device and Disabled.

- 1st Boot Device - 1st Floppy Drive
- 2nd Boot Device - [USB: XXXXXXXXXX]

### ► Hard Disk Drives

This feature allows the user to specify the boot sequence from all available hard disk drives. The settings are Disabled and a list of all hard disk drives that have been detected (i.e., 1st Drive, 2nd Drive, 3rd Drive, etc).

### ► Removable Drives

This feature allows the user to specify the boot sequence from available Removable Drives. The settings are 1st boot device, 2nd boot device, and Disabled.

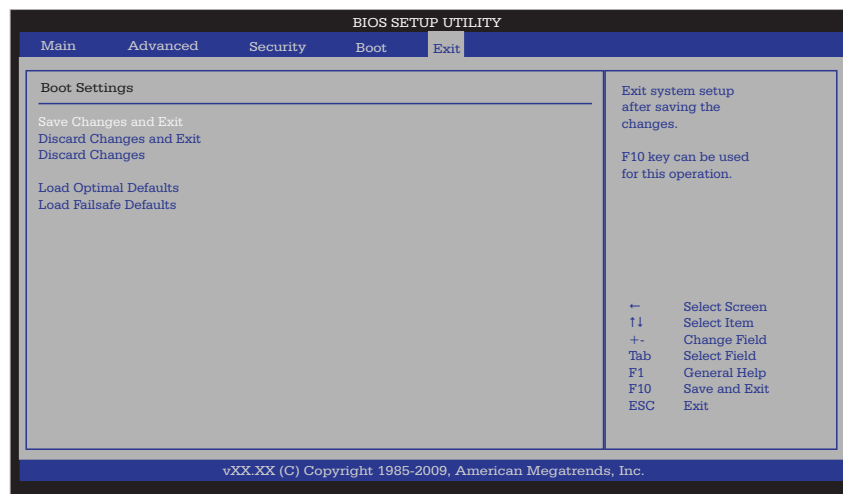

- 1st Drive
- 2nd Drive - [USB: XXXXXXXXXX]

### ► CD/DVD Drives

This feature allows the user to specify the boot sequence from available CD/DVD Drives (i.e., 1st Drive, 2nd Drive, etc).

## 4-6 Exit Options

Select the Exit tab from the AMI BIOS Setup Utility screen to enter the Exit BIOS Setup screen.

### Save Changes and Exit

When you have completed the system configuration changes, select this option to leave the BIOS Setup Utility and reboot the computer, so the new system configuration parameters can take effect. Select Save Changes and Exit from the Exit menu and press <Enter>.

### Discard Changes and Exit

Select this option to quit the BIOS Setup without making any permanent changes to the system configuration, and reboot the computer. Select Discard Changes and Exit from the Exit menu and press <Enter>.

### Discard Changes

Select this option and press <Enter> to discard all the changes and return to the AMI BIOS Utility Program.

### Load Optimal Defaults

To set this feature, select Load Optimal Defaults from the Exit menu and press <Enter>. Then, select OK to allow the AMI BIOS to automatically load Optimal Defaults to the BIOS Settings. The Optimal settings are designed for maximum system performance, but may not work best for all computer applications.

### Load Fail-Safe Defaults

To set this feature, select Load Fail-Safe Defaults from the Exit menu and press <Enter>. The Fail-Safe settings are designed for maximum system stability, but not for maximum performance.

## 4-7 BIOS Recovery

**Warning!** Do not upgrade the BIOS unless your system has a BIOS-related issue. Flashing the wrong BIOS can cause irreparable damage to the system. In no event shall Supermicro be liable for direct, indirect, special, incidental, or consequential damages arising from a BIOS update. If you need to update the BIOS, do not shut down or reset the system while the BIOS is updating. This is to avoid possible boot failure.

### How to Recover the AMIBIOS Image (-the Main BIOS Block)

An AMIBIOS flash chip consists of a boot sector block, and a main BIOS code block (a main BIOS image). The boot sector block contains critical BIOS code, including memory detection and recovery code to be used to flash a new BIOS image if the original BIOS Image is corrupted. When the system is powered on, the boot sector code executes first. Once it is completed, the main BIOS code will continue with system initialization and complete the bootup process.

**Notes:** BIOS Recovery described below is used when the main BIOS block crashes. However, when the BIOS Boot sector crashes, you will need to send the motherboard back to Supermicro for RMA repairs.

#### 4.7.1 Boot Sector Recovery from a USB Device

This feature allows the user to recover a BIOS image using a USB device without additional utilities needed. A user can download the BIOS image into a USB flash device, and name the file "SUPER.ROM" for the recovery process to load the file. A USB flash device such as a USB Flash Drive, a USB CDRW or a USB CDRW device can be used for this purpose,

1. Insert the USB device that contains the new BIOS image (the ROM files) saved in a root directory into your USB drive.
2. While turning the power on, press and hold <Ctrl> and <Home> at the same time until the USB Access LED Indicator comes on. This might take a few seconds.
3. Once the USB drive LED is on, release the <Ctrl> and <Home> keys. AMIBIOS will issue beep codes to indicate that the BIOS ROM file is being updated.
4. When BIOS flashing is completed, the computer will reboot. Do not interrupt the flashing process until it is completed.

### **4.7.2 Boot Sector Recovery from an IDE CD-ROM**

This process is almost identical to the process of Boot Sector Recovery from a USB device, except that the BIOS image file is loaded from a CD-ROM. Use a CD-R or CD-RW drive to burn a CD with the BIOS image file in it, and name the file "SUPER.ROM" for the recovery process to load the file.

### **4.7.3 Boot Sector Recovery from a Serial Port ("Serial Flash")**

This process, also known as "Serial Flash," allows the user to use a serial port to load a BIOS image for Boot Sector recovery. This feature is usually used for embedded systems that rely on a serial port for remote access and debugging.

#### ***Requirements***

In order to use Serial Flash for Boot Sector Recovery, you will need to meet the following requirements.

- The "Target system," the system that needs BIOS updates, must have a serial port and "Serial Flash" support embedded in the BIOS image file.
- The "Host system" should also have a serial port and a terminal program that supports XModem Transfer protocol (Hyper Terminal for the Windows operating systems, and minicom for Linux/FreeSBD, etc.).
- A Null\_modem serial cable

#### ***How to use Serial Flash for Boot Sector Recovery***

1. Connect a Null\_modem serial cable between the target system and the host system that runs the terminal program.
2. Make sure that the new BIOS Image file is accessible for the host system.
3. Start the terminal program on the host system and create a new connection. Use the following communication parameters for the new connection.
  - Bits per second: 115200 bits/sec.
  - Data Bits: 8
  - Parity: None
  - Stop Bit: 1
  - Flow Control: None

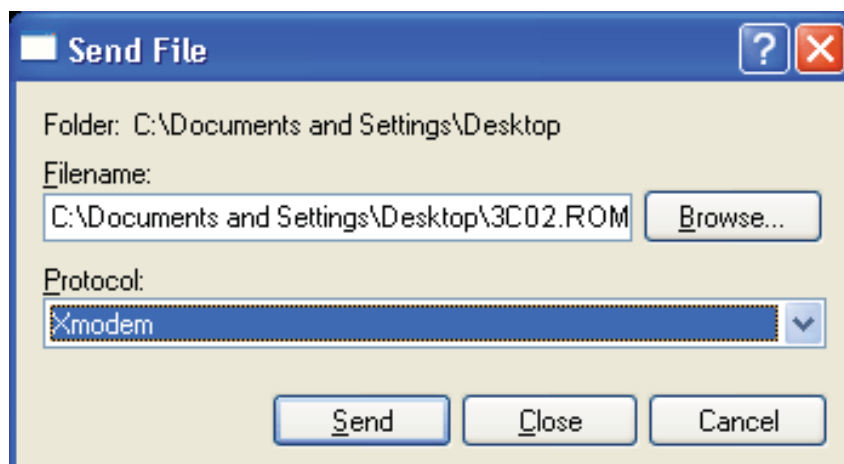

4. Power on your system and click the <Connect> button in the Hyper Terminal. The terminal screen will display the following messages.

```
Press <SpaceBar> to update BIOS.
Confirm update BIOS? (y/n) y
Begin remote BIOS flash? (y/n) y
Starting remote flash.
Upload new BIOS file using Xmodem protocol.
```

5. Following the instructions given on the screen to update the BIOS. These instructions are also shown below.
    - a. At the prompt, press the <SpaceBar> to update the BIOS.
    - b. When asked to confirm BIOS updating, press <y> to confirm BIOS updates.
    - c. Press <y> again to begin flashing BIOS remotely.
-  **Note:** Be sure to complete Steps a~c above quickly because you have a second or less to do so.
6. Once you've completed the instructions given, a screen will display to indicate that remote flashing is starting and the new BIOS file is being uploaded.
  7. To use Hyper Terminal to transfer the XModem protocol by using the "Send File" dialog under the "Transfer" menu, follow the instructions below to complete XModem transfers.
    - a. Select the "Transfer" menu and enter <Send>.

- b. Specify the location of the ROM file and select the proper protocol (XModem).
  - c. Press <Send> to start ROM File extraction. (See the picture below.)

- d. Once the ROM file extraction is completed, the message: "New BIOS received OK" will display.

```
Starting FLASH Recovery.
NVRAM data will be destroyed.
CMOS data will be preserved.
.....
Ending FLASH Recovery.
FLASH Update completed successfully.
Rebooting...
```

8. Once remote BIOS flash is completed, the system will reboot.

 **Note:** AMIBIOS Serial Flash will work with any terminal communications program that supports VT-100 and XModem protocols, including protocols designed for GNU/LINUX & BSD operating systems such as minicom. It is recommended that the terminal program be configured to use the 'CR/LF' style of line termination.

## Appendix A

### BIOS Error Beep Codes

During the POST (Power-On Self-Test) routines, which are performed each time the system is powered on, errors may occur.

Non-fatal errors are those which, in most cases, allow the system to continue the boot-up process. The error messages normally appear on the screen.

Fatal errors will not allow the system to continue the boot-up procedure. If a fatal error occurs, you should consult with your system manufacturer for possible repairs.

#### A-1 BIOS Error Beep Codes

BIOS Error Beep Codes		
Beep Code	Error Message	Description
1 beep	Refresh	Circuits have been reset. (Ready to power up)
5 short beeps + 1 long beep	Memory error	No memory detected in the system
8 beeps	Display memory read/write error	Video adapter missing or with faulty memory
1 continuous beep (with the front panel OH LED on)	System Overheat	1 continuous beep with the front panel OH LED on

## Appendix B

### Installing the Windows OS

After all hardware components have been installed, you must first configure Intel South Bridge RAID Settings before you install the Windows OS and other software drivers. To configure RAID settings, please refer to RAID Configuration User Guides posted on our web site at [www.supermicro.com/support/manuals](http://www.supermicro.com/support/manuals).

**Note:** The following OS installation instructions are written for the Windows XP/2003 OS only. If you have the Windows 2008 or Windows Vista OS, please follow the instructions displayed on your screen to install the OS.

#### B-1 Installing the Windows OS for a RAID System

1. Insert Microsoft's Windows XP/Windows 2003 Setup CD in the CD Drive, and the system will start booting up from CD.
2. Press the <F6> key when the message-" Press F6 if you need to install a third party SCSI or RAID driver" displays.
3. When the Windows XP/Windows 2003 Setup screen appears, press "S" to specify additional device(s).
4. Insert the driver diskette-"Intel AA RAID XP/2003 Driver for ICH10R" into Drive A: and press the <Enter> key.
5. Choose the Intel(R) ICH10R *SATA RAID Controller* from the list indicated in the XP/2003 Setup Screen, and press the <Enter> key.
6. Press the <Enter> key to continue the installation process. (If you need to specify any additional devices to be installed, do it at this time.) Once all devices are specified, press the <Enter> key to continue with the installation.
7. From the Windows XP/Windows 2003 Setup screen, press the <Enter> key. The XP/2003 Setup will automatically load all device files and then, continue the Windows XP/Windows 2003 installation.
8. After the Windows XP/Windows 2003 OS Installation is completed, the system will automatically reboot.

## **B-2 Installing the Windows OS for a Non-RAID System**

1. Insert Microsoft's Windows OS Setup CD in the CD Driver, and the system will start booting up from CD.
2. Continue with the OS installation. The Windows OS Setup screen will display.
3. From the Windows OS Setup screen, press the <Enter> key. The OS Setup will automatically load all device files and then continue with the Windows OS installation.
4. After the Windows OS Installation is completed, the system will automatically reboot.
5. Insert the Supermicro Setup CD that came with your motherboard into the CD Drive during system boot, and the main screen will display.

## Appendix C

### Software Installation Instructions

#### C-1 Installing Software Programs

After you've installed the Windows Operating System, a screen as shown below will appear. You are ready to install software programs and drivers that have not yet been installed. To install these software programs and drivers, click the icons to the right of these items.

**Driver/Tool Installation Display Screen**

#### Notes:

1. Click the icons showing a hand writing on the paper to view the readme files for each item. Click on a computer icon to the right of an item to install an item (from top to the bottom) one at a time. After installing each item, you must re-boot the system before proceeding with the next item on the list. The bottom icon with a CD on it allows you to view the entire contents of the CD.

2. When making a storage driver diskette by booting into a Driver CD, please set the SATA Configuration to "Compatible Mode" and configure SATA as IDE in the BIOS Setup. After making the driver diskette, be sure to change the SATA settings back to your original settings.

## C-2 Configuring Supero Doctor III

The Supero Doctor III program is a Web-based management tool that supports remote management capability. It includes Remote and Local Management tools. The local management is called the SD III Client. The Supero Doctor III program included on the CDROM that came with your motherboard allows you to monitor the environment and operations of your system. Supero Doctor III displays crucial system information such as CPU temperature, system voltages and fan status. See the Figure below for a display of the Supero Doctor III interface.

**Note:** 1 The default user name and password are ADMIN.

**Note 2:** In the Windows OS environment, the Supero Doctor III settings take precedence over the BIOS settings. When first installed, Supero Doctor III adopts the temperature threshold settings previously set in BIOS. Any subsequent changes to these thresholds must be made within Supero Doctor, since the SD III settings override the BIOS settings. For the Windows OS to adopt the BIOS temperature threshold settings, please change the SDIII settings to be the same as those set in BIOS.

### Supero Doctor III Interface Display Screen-I (Health Information)

## Supero Doctor III Interface Display Screen-II (Remote Control)

 **Note:** SD III Software Revision 1.0 can be downloaded from our Web site at: [ftp://ftp.supermicro.com/utility/Supero\\_Doctor\\_III/](ftp://ftp.supermicro.com/utility/Supero_Doctor_III/). You can also download SDIII User's Guide at: <http://www.supermicro.com/PRODUCT/Manuals/SDIII/UserGuide.pdf>. For Linux, we will still recommend that you use Supero Doctor II.

## Notes

(Disclaimer Continued)

The products sold by Supermicro are not intended for and will not be used in life support systems, medical equipment, nuclear facilities or systems, aircraft, aircraft devices, aircraft/emergency communication devices or other critical systems whose failure to perform be reasonably expected to result in significant injury or loss of life or catastrophic property damage. Accordingly, Supermicro disclaims any and all liability, and should buyer use or sell such products for use in such ultra-hazardous applications, it does so entirely at its own risk. Furthermore, buyer agrees to fully indemnify, defend and hold Supermicro harmless for and against any and all claims, demands, actions, litigation, and proceedings of any kind arising out of or related to such ultra-hazardous use or sale.
